

## A profound shift in the global order

**Mains Syllabus: GS II - Bilateral, regional and global groupings and agreements involving India and/or affecting India's interests; Important International institutions, agencies and fora- their structure, mandate.**

### Why in the News?

Instead of trade routes, global value chains are being reshaped by force recently.

### How has the globalization evolved?

- **Globalization** - It refers to the increasing interconnectedness and integration of economies, cultures, and societies worldwide.
- It is a 75-year-old post-colonial order characterised by multilateralism and rule-based restrictions on all for the common good.
- **Early Waves and Pre-20th Century** - The first wave of globalization occurred in the 19th century up to 1914, characterized by increased trade and migration facilitated by industrial advances and imperial expansion
- **Interwar Period and World Wars** - Globalization slowed significantly during the World Wars and the interwar period due to geopolitical conflicts and protectionism.
- **Post-World War II Resurgence** - After WWII, the 2<sup>nd</sup> wave of globalization revived under U.S. leadership with institutions like
  - Bretton Woods system
  - International Monetary Fund
  - World Bank
  - General Agreement on Tariffs and Trade (GATT), which evolved into the World Trade Organization (WTO).
- This period saw a rules-based international order promoting free trade, economic cooperation, and technological advances such as container shipping and aviation, which lowered costs and connected markets globally.
- **Decolonization**- The dismantling of European empires and the rise of independent nations in Asia and Africa.
- **3rd Wave** - The 1990s and early 2000s marked the expansion of global trade, multinational corporations, and digital communication, further accelerating integration.
- China's accession to the WTO in 2001 was a major milestone, establishing it as a global economic superpower and reshaping global supply chains.

Globalization Era	Age of Discovery (15 <sup>th</sup> -18 <sup>th</sup> century)	Globalization 1.0 (19 <sup>th</sup> century – 1914)	Globalization 2.0 (1945-1989)	Globalization 3.0 (1989-2008)	Globalization 4.0
Leading Exports	Raw Material / Basic Goods	Textiles / Industrial Goods	Factories	Global Supply Chain	Digital Goods / Services
Leading Nations					
Exports as % World GDP	<5%	6-14%	5-15%	15-20%	?
Enabling Era	Scientific Revolution (15 <sup>th</sup> -17 <sup>th</sup> century)	1st Industrial Revolution (1780s-mid 19 <sup>th</sup> century)	2 <sup>nd</sup> Industrial Revolution (1870s-1910s)	3 <sup>rd</sup> Industrial Revolution (1960s-1990s)	4 <sup>th</sup> Industrial Revolution (2000s-2010s)
Enabling Innovations					
Characterizing GDP Trend	Europe ↗	Britain ↗↗	World ↗	United States ↗↗↗	China ↗↗↗

History of Globalization and Industrial Revolutions – by Peter Vanham, World Economic Forum

## What are the recent changes in the global order?

- **Multipolarity** - Global power is no longer dominated by a single superpower (e.g. the U.S.) but is increasingly distributed among multiple centers — notably China, the European Union, India, and other regional blocs.
- **Loss of trust in international organizations** - The World Trade Organization and the United Nations and Treaties lost their utility to the proponents, leading to U.S. withdrawals.
- **Decline of G 7** - The COVID-19 pandemic exposed the G-7 scrambling to corner medicines, oblivious of the plight of others.
- Now, the G-7 is splitting leaving a vacuum and global institutions such as BRICS will soon have more requests for membership.
- **Rise of Asia** - Asia will soon again have two-thirds of global wealth and power.
- **Shifting Alliances and Partnerships** - Countries are increasingly forming bilateral deals and regional alliances to pursue their specific interests.
- **Geo-economics** - Countries are using economic tools (tariffs, sanctions, investment restrictions, export controls) as weapons in geopolitical conflicts.
- For example, U.S. chip export bans to China

- **Digital Globalization** - Data, digital services, and software flows now drive more of the global economy than physical goods.
- **Green Globalization** - Climate goals are reshaping trade and investment patterns.
- For example , EU's Carbon Border Adjustment Mechanism (CBAM) — taxes on imports from high-emission countries.

### What lies ahead?

- India has to be strategic to grasp new opportunities with the 'dismantling' of the WTO just as China used its entry into the WTO for its rise.
- As the WTO's 'most-favoured nation' clause of non-discrimination withers away, it is in India's longer term interest to propose a new cooperative architecture to ASEAN and the African Union, as their potential consumption will exceed current consumption in the U.S. and Europe.
- The turmoil within the Association of Southeast Asian Nations (ASEAN) is an opportunity to jointly work towards an Asian common market, with bilateral concessions to share prosperity.
- A new type of principles of global governance is the need of the hour for a more equal world.
- Gaining from global value chains that are dependent more on technology than on tariffs requires laying out a new type of rules that reduce non-tariff barriers .
- Linkages between goods, services, investment and infrastructure need to be treated as part of composite agreements, with a review of national impacts annually.
- New policy groups need to engage and seek complementarity with China, ASEAN and Africa as value chains get restructured.
