Addressing Gold Imports

Why in news?

\n\n

Union government plans to curb the gold imports under non-essential imports.

\n\n

What is the status of India’s gold import?

\n\n

\n
- Given India’s imports of gold were $8.4bn in Q1FY19, they were 18% of the trade deficit in that quarter.
\n
- Indeed, with the current account deficit for FY19 looking like it could be in the 2.8% of GDP range.
\n
- Between FY17 and FY18, for instance, prices of gold fell from Rs 27,133 per ten grams to Rs 26,633.
\n
- During this period, demand also rose, from 172.5 tonnes to 181.2 tonnes.
\n
- The increased demand was just driven by only prices and also the fact that GDP growth fell from 7.2% in FY17 to 6.7% in FY18.
\n

\n\n

Why government want to curb gold imports?

\n\n

\n
- During FY13 and FY14, for instance, gold prices collapsed from Rs 28,923 per tonne to Rs 25,752.
\n
- But instead of demand shooting up, it fell from 234.2 tonnes to 224.2 tonnes, primarily due to the fact that GDP rose from 5.5% to 6.4% in this period.
\n
- In FY15, prices fell further, to Rs 24,506 per tonne, but demand continued to

fall, to 214.5 tonnes, once again due to the fact that GDP growth rose, to 7.5%.
\n
- Looked at another way, demand has continued to fall even though the current import duty of 10% was put in place over five years ago.
\n
- Demand was 222.4 tonnes in FY14—the duty was raised from 8% to 10% in August 2013 and it was 181.2 tonnes in FY18.
\n
- Even so, the absolute value of imports is high at $34bn in FY18 and $28bn in FY17 it was at its peak in FY12, at $57bn, So, the government would want to cut imports.
\n
- Union government to address this issue is looking at how to curb "non-essential imports", and gold is seen as one such import.
\n

\n\n

What are the issues with government's plan?

\n\n

\n
- Hiking import duties, however, may not work much since gold demand is not always driven by prices, and a lot depends upon the state of the economy, both locally as well as internationally.
\n
- There is also the likelihood of smuggling increasing as import duties rise, they are already a high 10%.
\n
- To the extent gold is a form of saving, a 10% import duty is, though, unfair to begin with since no other form of savings attracts a tax, leave alone a high one.
\n

\n\n

What measures needs to be considered?

\n\n

\n
- To meet the objective of lowering imports while making savings in gold possible that the government came out with various gold bonds since November 2015.
\n

- But there was little demand for gold bonds is that as the scheme does not have the essential properties of gold.
  \n
- It is not, for instance, available 24×7, but is sold in fixed tranches by the government.
  \n
- Once bought, it is not liquid and needs to be held for five years before redemption, a secondary market does exist, but this is hardly as liquid.
  \n
- Nor are gold prices of the current day used for either purchases or sales; an average of the last few days is used.
  \n
- This means, that if gold prices are falling, anyone buying a bond ends up paying a higher price.
  \n
- And when prices are rising, anyone selling ends up getting a lower price.
  \n
- If the government is serious about lowering gold demand, rather than looking at hiking the import duty, it must find ways to make the gold bond a success.
