

## Addressing malnutrition

### What is the issue?

\n\n

\n

- Various findings suggest that measures to address the malnutrition problem are not paying the desired results.

\n

- This rises the need for alternative measures to take the benefits to the targeted audience.

\n

\n\n

### How serious is the malnutrition problem?

\n\n

\n

- The recent National Family Health Survey data has indicated that a third of our child population is being stunted.

\n

- And more than half the women in the reproductive age-group are being anaemic.

\n

- Besides, a recent World Bank Report has highlighted that India is paying about 9-10 per cent income penalty.

\n

- This is because of the fact that roughly three-fourth of the present workforce suffered from stunting in childhood.

\n

- The adverse effect on lifelong learning capacities and lower adult productivity is the result of early onset of stunting hampering mental and physical growth.

\n

\n\n

### What are the limitations in addressing this?

\n\n

- \n
- Government initiatives like the National Health Mission (NHM), Integrated Child Development Services (ICDS) and the Swachh Bharat Mission (SBM) have come in this regard.
- \n
- However the pace of reduction of malnutrition has been suboptimal.
- \n
- This is partially explained by our narrow approach to food.
- \n
- As, measures have largely relied on in-kind transfers such as in the foodgrains through Public Distribution System (PDS), meals or Take Home Rations (THR) through Anganwadi Centres (AWC).
- \n
- Besides, in many states these initiatives are marred by pilferage and leakages.
- \n
- Also, there is only around 50 per cent enrolment because of lack of awareness of the programmes, seasonal migration and discrimination by field workers.
- \n
- The successful results of in-kind transfers and meal programmes in southern States are largely due to the underlying social capital in these States making it context-specific.
- \n

\n\n

## **What is the way forward?**

\n\n

- \n
- An alternative to address this could be Conditional Cash Transfers (CCTs) that have emerged as an effective policy tool in driving developmental change globally.
- \n
- CCTs are preferred over the food transfers as they have been successful in:
- \n

\n\n

- \n
1. reducing poverty.
- \n
2. bridging inequality.
- \n
3. inducing desired behavioural changes.

\n

4. diversifying diets and increasing consumption of meat, milk, vegetables and sugar.

\n

5. addressing nutritional deficits.

\n

\n\n

\n

- Cash in the hands of the women, with the right kind of 'messaging' can make significant improvements in addressing the malnutrition crisis.
