

Agriculture Needs a Predictable Policy Framework

What is the issue?

\n\n

Predictability and coherence in government policies are curtail to address farmer distress.

\n\n

What are the recent trends?

\n\n

\n

- There has been a significant upsurge in pulse imports, in the range of 30% to 46%, in four out of the first six months of this financial year.

\n

- But currently, along the currently adequate stockpile of pulses, the domestic production is also at a record high and a bumper rabi crop is expected.

\n

- Among pulses chana and masoor are key contributors for India's pulses imports that totalled to over \$1.6 billion in the previous two fiscals.

\n

- Hence, the government slapped a customs duty of 30% on the import of 'chana and masoor dal' to prevent cheap imports from hitting farmer earnings.

\n

- Notably, as international prices are staying low for long, traders are currently thought to prefer imports over local procurement due to the cost advantage.

\n

- This is move is seemingly late, as imports pressures has already eased considerably since September.

\n

\n\n

What is the problem with such actions?

\n\n

\n

- Other than the late response, reflexively raising or breaking such tariff walls, as the production cycle warrants, doesn't add up to a serious long-term policy.

\n

- Rather a policy for boosting farm incomes and ensuring food security should be focused and well thought.

\n

- Notably, in the case of a key protein source like pulses, such actions may be counterproductive

in the long run as it may hurt the exporter sentiments.

\n

- Significantly, last year, while pulse prices were soaring in the Indian market, pacts were signed with multiple countries to increase pulses imports.

\n

- If such strategic agreements are undermined impulsively, then it would become tougher to deal with times of shortages.

\n

\n\n

What is the way forward?

\n\n

\n

- Like investors, farmers too need predictability and coherence in government policies to be able to plan production cycles ahead and enhance earnings.

\n

- Also, it needs to be recognized that increasing import duty won't automatically lead to increase in farm incomes.

\n

- The challenge before the government is to enhance farm incomes without stirring up food inflation.

\n

- Also, building and protecting carefully cultivated food security partnerships around the world is another key aspect.
