

## **Amendments to “National Medical Commission Bill”**

### **What is the issue?**

\n\n

\n

- National Medical Commission (NMC) Bill proposes to overhaul the medical administration in the country.

\n

- The government is hence said to be considering significant amendments to the Bill - based on the recommendations of the parliamentary committee.

\n

\n\n

### **What is NMC bill?**

\n\n

\n

- NMC Bill intends to replace “Medical Council of India” (MCI) with “National Medical Commission” (NMC), as the chief regulator for medical education.

\n

- The initial draft of the bill became highly controversial due to the sweeping changes that it proposed - which saw set of intense debates.

\n

- Hence, it is said that the government is considering making changes to some significant provisions in the original bill.

\n

\n\n

### **What are the significant aspects of the bill?**

\n\n

### **Exit Exam**

\n\n

\n

- It has been proposal to adapt the final MBBS examination into a National Exit Test (NEXT), in order to ensure a standardised potency for practice.

\n

- The present MBBS curriculum is said to be more theoretical in its approach to learning and assessment, and breeds memory based studying.  
\n
- As there is little attention is paid to testing conceptual soundness and problem solving ability – a standardised exit exam might help in overcoming these.  
\n
- While the exact structure of the proposed NEXT isn't clear, it is expected to be a mix of “descriptive and multiple choice questions”.  
\n
- Such standardised and quality testing is likely to nudge universities to improve their quality of teaching and assessment.  
\n
- Significantly, the bill needs further clarity is the provisions for students to retake the exam in case of failure (or needing score improvement).  
\n

\n\n

## **Integrating Medical Streams**

\n\n

- There are nearly 7,70,000 qualified AYUSH (Ayurveda, Yoga and Naturopathy, Unani, Siddha, and Homeopathy) doctors in the country.  
\n

\n\n

- A bridge course was initially proposed for AYUSH practitioners to hand out allopathic medication – but this evoked the strongest protests.  
\n
- Including AYUSH doctors to the allopathic pool will enhance India's doctor-patient ratio to a decent 1:1000 – but there are inherent risks in such moves.  
\n
- A mere bridge course for AYUSH doctors to permit them practice modern medicine is a threat to the very integrity of our medical landscape.  
\n
- Hence, this idea is likely to be scrapped, although some AYUSH doctors serving in remote areas currently do provide for limited allopathic drugs.  
\n

\n\n

## **Addressing Quackery**

\n\n

\n

- Nearly 70% of primary care in rural India is provided by informal providers, and quackery is indeed rampant.

\n

- Considering the pathetic shortage of medical practitioners, can be potentially useful resources if they are institutionalised with considerable safeguards.

\n

- They can be trained under short-term courses to create medical assistants entrusted with primary curative, and preventive care.
