

## Bellandur Lake Fire

### Why in news?

\n\n

Bengaluru's Bellandur Lake has caught fire for the third time.

\n\n

### Why the lake had caught fire?

\n\n

\n

- Factories waste and general sewage have led to extreme levels of water pollution in very few lakes that are left in the city today.

\n

- The modern housing projects are draining their sewage into the lakes to a point where the lakes became inflammable.

\n

- Bellandur lake, now has a toxic foam, which is caused by allowing untreated sewage water to flow into the lakes.

\n

- The lake catches fire because of the **phosphorus and oil on its surface**.

\n

\n\n

### Why the lake count has started to decrease?

\n\n

\n

- The terrain on which Bengaluru is situated allowed for the natural formation of lakes. These lakes, were at one time, the main sources of water for the city.

\n

- The essential nature of lakes to life has even gave rise to development of a sacred practice called **Karaga**.

\n

- The city has lost an estimated 79% of water bodies and 80% of its tree cover from the baseline year of 1973.

- \n
- As the city grew, it faced a dilemma. If the additional population was to be accommodated, it would require more land.
- \n
- If it decides to protect all its lakes, it must expand far beyond its already extensive boundaries, thereby hurting the interests of farming.
- \n
- In this context, the city chose to hurt the lake beds instead.
- \n

\n\n

### Why case-by-case approach won't work?

\n\n

- \n
- Several civic groups went to court against encroachments into lake beds and even had occasional successes. Like, the courts have ordered the removal of encroachments.
- \n
- But this case-by-case approach had its shortcomings.
- \n
- The **debates inevitably moved from the larger issue** of the role of lakes to the details of specific cases.
- \n

\n\n

### What did the state government do?

\n\n

- \n
- Bangalore Development Authority (BDA) is currently the custodian of the water body for its rejuvenation.
- \n
- But BDA feels that there is **no point in restoring a lake if sewage water is not stopped** entering the lake.
- \n
- Bengaluru Water Supply and Sewerage Board is in charge of diversion of sewage water, which clearly it has not been able to do.
- \n
- Meanwhile, the response of the state government too has been piecemeal.
- \n
- But without addressing the question of how many lakes a modern city could sustain, they typically will end up with policies that are considered

impractical by those who see cities as engines of growth.
