

## Booming World Economy

### What is the issue?

\n\n

\n

- Almost all economies are growing worldwide for the first time since the 2008 financial crisis.

\n

- But there are looming risks that needs to be addressed.

\n

\n\n

### What are trends in major zones?

\n\n

\n

- **USA** - While Mr. Trump wants to strengthen the US economy is a positive, the recent tax reforms may distort the sensitive structure of world trade.

\n

- If everything goes as US strategists hope, the US current account deficit (essentially the balance of imports and exports) could be halved.

\n

- Also, US companies such as “Apple”, which have long indulged in rigorous tax avoidance strategies would have to pay taxes at home.

\n

- **Germany** - This is Europe’s main economy and has now seen strong growth for eight consecutive years and Unemployment is at a record low.

\n

- The government is flush with cash due to swelling tax receipts and budget surpluses, and German exports continue to outstrip imports.

\n

- But, for the past several years, the German government’s savings drive and strictly balanced budgets has led to poor government spending.

\n

- This has resulted in creaking infrastructure, ill-equipped schools and universities, and delays in expanding broadband networks among others.

\n

- Furthermore, Germany faces an acute shortage of qualified staff in many

industries despite the increase in foreign skilled workers.

\n

- **Rest** - The entire of Euro-zone's formerly depressed economies such as Greece, Spain, Portugal and Ireland (except Italy) recorded significant growth.

\n

- While except the war torn Middle East, all regions of the global economy have been growing in sync and economists project a 3.8% growth in 2018.

\n

- While Brexit will cause some economic slowdown, the effect isn't expected to be a sustained drag on the growth engines.

\n

\n\n

## What is India's case?

\n\n

\n

- China and India continue to lead the pack in Asia, and have the retained the tag of fast growing major economies.

\n

- But India's growth is expected to slow down from the current level although it is still projected at a robust 6.5%.

\n

- The Modi government has also eased regulations for foreign investors in an effort to attract capital and boost growth.

\n

- The country has become an attractive destination for foreign investment, receiving more than \$60 billion in FDI, last year alone.

\n

- Furthermore, India is set to overtake the United Kingdom and France to become the world's 5<sup>th</sup> largest economy next year.

\n

\n\n

## What are the challenges?

\n\n

\n

- Despite the overwhelming positives, the global economy still faces a raft of threats and uncertainties, which could derail growth.

\n

\n\n

\n

- German exporters are worried about their American sales and industrialists have demanded tax reforms to compensate for backlashes from US policies.

\n

- On the political front, Mr. Trump's irrational and intuitive actions has become a big cause of worry and uncertainty.

\n

- Also, the Korean crisis seems to have no end and more trouble is also brewing in the Middle East, all of which can distort the global economy.

\n

- It is essential to remember that every boom also carries within itself the germ of a crisis and needs cautious manoeuvring.
