Budget 2017 - Curbing Thin Capitalisation

Why in news?

\n\n

The steps were taken in Union Budget 2017 to address the issue of thin capitalisation.

\n\n

What is Thin Capitalisation?

\n\n

When a local company has more debt than equity, then the arrangement is called thin capitalisation.

\n\n

Why is thin capitalisation bad?

\n\n

\n
- Generally interest paid for a debt is not taxed.
\n
- Therefore an Indian unit would pay high interest to the foreign associated firm to avoid tax.
\n
- Also the interest paid by the local company to the foreign associate was taxable at a lower rate when the foreign company was registered in a tax treaty country.
\n

\n\n

What is EBITDA?

\n\n

\n
- Earnings before interest, tax, depreciation and amortization (**EBITDA**) is a measure of a company's operating performance.
\n

- It is a way to evaluate a company's performance without having to include financing decisions, accounting decisions or tax environments.
  \n

\n\n

What are the measures taken?

\n\n

  \n
- Section 94 B of the Finance Bill, 2017 increased the tax burden on local company with thin capitalisation.
  \n
- If the interest paid by a local company is more than 30% of Ebitda, it will not beallowed any tax exemption.
  \n
- Section 94 B is applicable to an Indian firm or MNC operating via permanent establishment in India, which has debt from a non-resident associated enterprise and pays interest or similar consideration of over Rs 1 crore to the associated enterprise.
  \n

\n\n

What are the consequences?

\n\n

  \n
- Introduction of thin capitalisation rules is in line with **international practice**.
  \n
- But it also has some negative effects.
  \n
- Tax payment of several companies with high debt and low Ebitda could increase, **reducing their profitability**.
  \n
- This provision could have an adverse impact on capital intensive and highly leveraged companies.
  \n
- This will affect the **capacity of a borrower to repay** the interest on borrowings and therefore it is a negative for banks too.
  \n
- New companies setting up branches or subsidiaries will also need to factor in the thin capitalisation limitations while determining their funding structure i.e might **deter new investments**.
