

Challenges Before the Budget

What is the issue?

 $n\n$

As the budget time is nearing, it becomes essential for the government to assess some challenging factors that exists in the economy.

 $n\n$

What are the challenges?

 $n\n$

\n

• Oil Prices - Oil prices have risen to \$68 per barrel, much higher than the anticipated levels.

\n

- \bullet It naturally calls for the government to reducing the taxes on petro-products. $\mbox{\sc h}$
- However, the resultant impact on fiscal deficit and inflation has to be taken into account.

\n

- The dangers may not threaten macro-economic stability, as has happened in the past, but they may impact growth.
- This will be the obverse of the growth bonus that the country got in 2014-16.
- The period saw oil prices fell considerably and GDP growth peaked at 7.9% in 2015-16.

\n

• **Inflation** - Higher inflation at present is threatened also by higher food prices.

۱n

• It makes it impossible for the Reserve Bank to cut interest rates in the foreseeable future.

\n

• **Deficit** - A higher-than-planned fiscal deficit would add to the already rising curve of general government deficits.

• It could also possibly raise the bond rates higher than their already elevated

levels, to meet out the deficit.

\n

- **Growth** The "advance" GDP figure for the current financial year, projecting growth at 6.5%, is short of earlier expectations of 6.7%.
- Next year's growth rate is likely to fall short of the 7.4% predicted by the IMF, but should cross the 7% threshold.
- This is expected to come largely as a benefit of a low base and by a recovery in exports.
- \bullet $\boldsymbol{Consumption}$ \boldsymbol{demand} is also considerably lower than the needed level to boost growth.
- **Revenue** The above factors indicate an overall low revenue potential in the coming period.

\n\n

What could possibly be done?

 $n\n$

\n

\n

• Expenditure control must logically be a necessary measure to tackle the low revenue.

\n

- This is especially given the uncertainty of when the GST revenues would rise to the budgeted level.
- \bullet The government should also look for ${\bf new}$ ${\bf revenue}$ ${\bf sources}$ that have not been tapped so far.
- The most obvious of these is long-term capital gains on shares, to match the **tax on capital gains** accruing from other classes of assets.
- This unfair tax holiday for just one class of investors, those who put their money in shares, should not be let to continue.
- \bullet However, such a tax would not be free of risk as overseas investors might choose to look elsewhere. \n
- Nevertheless, a deferred and phased introduction would not affect the

market or the investors.

۱n

 \bullet This could minimise the incremental tax burden as well as prove to be a potential source of revenue that the government is in dire need of. $\ensuremath{^{\text{\sc Nn}}}$
