

## De-globalisation and Implications

### What is the issue?

\n\n

\n

- The US-China trade tussle is perceived to be potential of becoming a trade war. Click [here](#) to know more.

\n

- This is raising global fears of a possible slowing down of the global economic recovery, due to de-globalisation.

\n

\n\n

### What is de-globalisation?

\n\n

\n

- "De-globalisation" refers to the trend of countries going back to "national interests first" attitude in trade and economic policies.

\n

- This often takes the form of tariffs or quantitative barriers.

\n

- They in turn impede free movement of people, products and services among countries.

\n

- The idea behind all this protectionism is to shield local manufacturing by making imports costlier.

\n

- The recent tariff decisions by US, China and later the European Union's 25% duty on certain US products reflect the trend.

\n

\n\n

### What are the implications?

\n\n

\n

- **Cost** - Tariff wars are just one aspect of de-globalisation policies.

- There are other implications that can cost countries.
- E.g. Britain's divorce with the EU is estimated to cost companies on both sides \$80 billion a year without a trade deal.
- **Trade network** - The world continues to remain highly globalised.

\n\n

- Given this, protectionist moves may overturn the fundamental premise on the basis of which global growth is estimated and organisations such as the WTO regulate global trade.
- Large, industrialised and prosperous nations are breaking ranks to erect new entry barriers for goods and services.
- This can drastically impact the fortunes of their many trade partners.
- **Economy** - All calculations of global economic growth, inflation and interest rates may get collapsed.
- E.g. the US economy imports a lot of inexpensive manufactured goods from China.
- If a tariff war increases costs of imports into the US, its domestic inflation may rocket and US interest rates may increase faster.
- The recent global bull market is grounded on a global recovery.
- De-globalisation can significantly impact this optimism.
- **People** - The US and the UK have already made immigration norms very stringent for outsiders.
- So the wave of de-globalisation now evident in trade can potentially move to the people as well.

\n\n

**Will it affect India?**

\n\n

\n

- India may not be much affected by the recent tussle over tariffs.
- \n
- As US derives only a little over 1% of its steel and aluminium imports from India.
- \n
- However, de-globalisation with respect to the mobility of services and people is certainly a cause of concern for India.
- \n
- It can impact both the export of services, and the trend of Indians migrating abroad for higher education and jobs.
