

Digital Connectivity in Rural India

Why in News?

The Department of Telecommunications (DoT) has recently released draft rules to operationalise the Digital Bharat Nidhi.

What is Telecom and Digital connectivity?

- **Telecom & Digital connectivity** A systems of <u>interconnected communication</u> <u>devices</u> and equipment that enable <u>people to communicate</u> with each other over long distances.
- They facilitate the transmission of *voice*, *data*, *and video* signals between devices, including smartphones, computers, and other communication devices.
- The foundation of digital transformation is telecom infrastructure.
 - Importance It allows extensive access, fast data transfer, and seamless communication.
- It propels the world's transition to a *digitally empowered society*.
- Integrating cutting-edge technologies like cloud computing, artificial intelligence, and the Internet of Things promotes *creativity* and *global connectedness* across sectors.

Status of Telecom and Digital Connectivity in India

- Global position It secures 60th rank in Network Readiness Index 2023
- It secures 2nd rank in Mobile broadband internet traffic within the country and in International Internet bandwidth.
- **Telecom sector** It is 2^{nd} largest telecom industry in the world.
- It is the 4th largest sector in terms of FDI inflows, contributing 6% of total FDI inflow.
- 100% Foreign Direct Investment (FDI) has been allowed.
- It contributes directly to 2.2 Mn employment and indirectly to 1.8 Mn jobs.
- **Teledensity** Telephone density is the number of telephone connections for every hundred individuals living within an area.
- India has an overall tele-density of 85.76%,
 - Rural market 59.44%
 - Urban market 133.42%.
- Internet subscribes Till 2023, the total number of internet subscribers increased to 918.19 Mn (narrowband + broadband subscribers).
- Out of total subscribers, <u>40.91% belong to the rural areas</u>.
- **5G network** It has been <u>rolled out in all 28 states and 8 UTs</u>.
- India, in terms of median mobile broadband speed, has reached 43rd position.
- **Data consumption** India is one of the highest consumers of data per day with *approximately 5 hours of daily time* spend on smartphones.

What are the steps taken to promote digital connectivity in rural India?

• BharatNet - Connecting 250,000 village councils with high-speed broadband through

optical fiber cables & Wi-Fi hotspots.

- **Digital India program** Transforming India into a digitally empowered society by providing <u>e-governance services</u> and establishing <u>Common Service Centers</u> (CSCs) at the village level.
- **USOF** Universal Service Obligation Fund is a pool of funds *generated by a 5% Universal Service Levy* charged upon all the telecom fund operators on their Adjusted Gross Revenue (AGR).
- This money would be used to fund the expansion of telecom networks in remote and rural areas, where private companies resist to invest and develop.
- **PM-WANI** Expanding *public Wi-Fi hotspots across rural areas* with simplified processes for setting up Wi-Fi service providers.
- **Skill development and digital literacy** Enhancing digital literacy through programs like *DISHA and PMGDISHA*, offering digital skills training to rural populations.
- **Financial inclusion** Providing banking and financial services through digital means with projects like *Jan Dhan Yojana, Aadhaar, and promoting digital payments*.
- **Smart villages and digital villages** Developing *model villages* with comprehensive digital infrastructure and integrating digital technologies to improve rural life quality.
- **Digital Bharat Nidhi** It is aimed at increasing telecom connectivity in rural areas.

Digital Bharat Nidhi

- It will replace Universal Service Obligation Fund and has wider scope than USOF.
- **Objectives** *Promoting access, affordability and delivery* of telecommunication services in under-served rural, remote and urban areas.
- Providing <u>targeted access for underserved groups</u> of society such as women, persons with disabilities and economically and socially weaker sections.
- *Funding research and development* of telecommunication services, technologies, and products.
- Supporting pilot projects, consultancy assistance and advisory support for improving connectivity.
- Creation of regulatory sandboxes.
- Developing and establishing relevant standards to meet national requirements and their standardisation in international standardisation bodies.
- \bullet $\underline{\it Encouraging\ start\text{-}\it ups}$ including the manufacturing of telecom equipment, among other things.
- **Funding** As per the Telecom Act, contributions made by telecom companies towards this fund will *first be credited to the Consolidated Fund of India* (CFI).
- The collected funds will be *moved to the DBN* from time to time.
- Implementation Centre will appoint an "administrator" who will select "DBN implementers" through "bidding" or invitation of applications from eligible persons.
- Any DBN implementer receiving funding from the DBN for establishing, operating, maintaining, or expanding a telecommunication network shall be delivered on an *open and non-discriminatory basis*.

What impedes rural digital connectivity?

 Infrastructure deficit - Still there are places which lack of basic infrastructure like electricity and roads, which can hinder the establishment and maintenance of telecom networks.

- **Geographical challenges** *Difficult terrain*, such as mountains and forests, makes infrastructure development challenging and expensive.
- **High implementation costs** The *cost of laying fiber optic* cables and setting up telecom towers in remote areas is high.
- **Underutilisation of USOF** It is primarily due to *underspending on the BharatNet project* for village fiber connectivity.
- **Resistance by private companies** They resist in offering their services in rural and remote areas as they are <u>not considered as revenue-generating markets.</u>
- **Financial constraints** *Lower income levels in rural areas* limit the ability of residents to afford digital devices and internet services.
- **Security concerns** *Vandalism and theft* of telecom equipment and challenges in ensuring cybersecurity and protecting user data.

What lies ahead?

- **Enhance mobile connectivity** Setting up mobile towers in remote regions and partnering with private operators to extend mobile network coverage.
- **Provide satellite connectivity** Using satellite communication to provide connectivity in areas with challenging terrain for terrestrial infrastructure.
- **Develop localized content & applications** Local languages and locally relevant digital content can increase engagement.
