

Felling of Trees in Delhi

What is the issue?

\n\n

\n

- Protests have erupted in Delhi over the felling of over 16,000 trees in government redevelopment yards.

\n

- Authorities argue that the numbers are exaggerated and in any case, they would plant more trees than are being felled.

\n

\n\n

What is the government policy?

\n\n

\n

- In India's countryside, forest lands underwent diversion for "non-forest purposes".

\n

- These have been compensated for, through a series of laws.

\n

- The Forest Conservation Act of 1980 was the foremost one.

\n

- The policy culminated in the Compensatory Afforestation Fund (CAF) Act of 2016.

\n

- It assumes that planting large number of trees would compensate for the loss.

\n

- However, how effectively will this redress cutting down natural wilderness is uncertain.

\n

- On the other hand, compensatory afforestation largely exists on paper.

\n

\n\n

Will planting new trees really help?

\n\n

\n

- Clearly, compensation is reduced to a matter of counting trees.
- \n
- But an old forest is a whole lot more than the sum of its trees.
- \n
- Plants, fungi, microbes, insects and animals are all part of a living jungle ecosystem.
- \n
- Recreating this community is not an easy task, as it takes decades.
- \n
- Also, soil with microorganisms and mycorrhiza inhabiting the humus takes 30,000 years to build up.
- \n

\n\n

What are the governance issues?

\n\n

\n

- The sole agency for carrying out compensatory afforestation is the Indian Forest Department.
- \n
- Rewilding is possible, but it needs tools, knowledge and techniques.
- \n
- But, no Forest Department in India has any experience or track record of doing any ecological restoration work of any kind.
- \n
- It is also not taught to foresters in their training.
- \n

\n\n

What is the case with Delhi?

\n\n

\n

- **Authority** - For compensatory afforestation, it is the Forest Department which implements the planting schemes.
- \n
- It is charged with compliance under the CAF Act.
- \n
- But, in a city like Delhi, the Forest Department is confused of what role to play.
- \n

- It is confused in the centre of power and with so many horticultural agencies competing for its natural turf.
\n
- The Forest Department thus plays little role in managing the green areas of Delhi.
\n
- This is the case even with the Central Ridge, which is nominally under its control.
\n

\n\n

- **Afforestation** - In Delhi, the land that is made available for afforestation is mostly least arable and degraded.
\n
- Also, small plots are crammed with large number of saplings which are not even native trees.
\n
- Clearly, they cannot be relied upon or sustained, once watering and care are withdrawn.
\n
- Delhi is one of the cities with toxic air quality in the world.
\n
- Given this, any development that adversely impacts Delhi's air quality needs a reassessment.
