

Flaws in IBC

What is the issue?

\n\n

\n

- The Insolvency and Bankruptcy Code (IBC), 2016 was enacted with the intention of improving the **ease of doing business** in India

\n

- The code is however said to have certain loopholes that goes against this principle.

\n

\n\n

What is IBC?

\n\n

\n

- It aims to overhaul laws relating to reorganisation and **insolvency resolution** of corporate persons, partnership firms, and individuals.

\n

- It attempts to ease the process of recovery of money by operational and financial creditors in a timely manner.

\n

- It places the onus on **professionals** to put forth the resolution plans.

\n

\n\n

How does it operate?

\n\n

\n

- When a firm defaults on its debt, its control will shift to a **committee of creditors**.

\n

- The committee will have 180 days to evaluate the proposals from various interested parties on how to either revive the company or enable liquidation.

\n

- The code has provisions for the creation of '**Insolvency Professionals**' who

would handle the commercial aspects of the resolution process.

\n

- Insolvency professional agencies will train and regulate these professionals.
- The **Debt Recovery Tribunal** act as adjudicating authorities for individuals and unlimited partnership firms, and **National Company Law Tribunal** would deal with companies and limited liability entities.
- **Insolvency and Bankruptcy Board of India** will be the overall regulator.

\n

\n\n

What are the shortcomings?

\n\n

\n

- The code fails to provide adequate safeguards to protect the rights of the company before handing over the management to the resolution professional.
- The Code rides substantially on the **unquestionable word of the creditors.**
- The Code fails to provide any opportunity to the corporate **debtor to make a representation** at any stage of the resolution process.
- The Code is also deficient in providing criteria for the qualification of the interim and of the final **insolvency resolution professionals.**
- It also leaves too much discretion in the hands of the IP.
- It allows for any person to access the information memorandum put together by the insolvency professional without restricting competitors or imposing any **confidentiality obligations.**
- This goes against the right to business.
- The Code fails to define a resolution applicant. All such **resolution plans** are placed before the financial creditors and is implemented by way of an order by the NCLT.
- If the financial creditors fail to arrive at a consensus, the default plan is to liquidate the company.
- The Code prohibits withdrawal of the application once it has been admitted.

\n

This means that there is no scope for settlement.

\n

\n\n

What could be done?

\n\n

\n

- The code must be robust, decentralized, less costly, inclusive and speedy.
- This would help businesses exit sooner and capital to be redeployed faster to productive firms, thereby improving economic output and employment.
- The code should encourage decentralization, reduce the role of courts or insolvency professionals and allow for a greater role for a market-friendly approach.
