

Global Importance of Greenland

Why in News?

US President-elect Donald Trump has expressed interest in acquiring Greenland.

- **Greenland** It is *world's largest island*.
- It is a *semiautonomous territory of Denmark*, a longtime U.S. ally and a founding member of NATO.

- **Environmental importance** It holds enough ice that if it all melts, the world's <u>seas</u> would rise by 7.4 meters.
- Melting of ice would reshape coastlines across the globe and potentially shift weather patterns.
- It plays a role in the dramatic freeze that two-thirds of the United States is currently experiencing.

In 2012, weather patterns over Greenland helped steer **Superstorm Sandy** into New York and New Jersey in the United States.

- It also *changes patterns in the jet stream*, which brings storms across the globe and dictates daily weather.
- Role in AMOC Ocean current It serves as the engine & on/off switch for Atlantic

Meridional Overturning Circulation (AMOc) that influences Earth's climate like hurricane and winter storms.

- **Economic importance** It has valuable <u>rare earth minerals</u> needed for telecommunications, as well as uranium, billions of untapped barrels of <u>oil and a vast</u> supply of natural gas.
- **Concerns** It is *warming 4 times faster* than the rest of the globe.
- Since 1992, Greenland has *lost about 182 billion tons of ice each year*, with losses hitting 489 billion tons a year in 2019.
- <u>AMOC is slowing down</u> because more fresh water is being dumped into the ocean by melting ice in Greenland.
- It is <u>also changing color</u> as it melts from the white of ice, which reflects sunlight, heat and energy away from the planet, <u>to the blue and green</u> of the ocean and land, which absorb much more energy.

Greenland is also home to a large U.S. military base.
