

Government's Plan on Borrowing

Why in news?

\n\n

Union government plans to borrow Rs 2.88 trillion in FY 2018-19.

\n\n

What is union government's plan on borrowing?

\n\n

\n

- Union government has planned to borrow Rs 2.88, against market expectation of Rs 3.3-3.6 trillion.

\n

- To meet its fiscal demands government usually borrows from the bond market and by using other instruments.

\n

- The normal practice of borrowing from the bond market will be around 60-65 per cent.

\n

- For now first half of borrowing government has planned 47.5% of budgeted amount for 2018-19.

\n

- The weekly borrowing size would also be Rs 120 billion, against the usual Rs 150-180 billion.

\n

- The Union will also reduce its planned buyback of government securities (G-Secs) by Rs 250 billion.

\n

\n\n

How this borrowing has been planned?

\n\n

\n

- The government plans to draw an additional Rs 250 billion from the National Small Savings Fund (NSSF) to finance the fiscal deficit for

2018-19.

\n

- For this RBI, on behalf of the government, will be issuing bonds in 1-4 year maturity, raising Rs 240 billion through the papers.

\n

- Inflation-indexed bonds linked to the consumer price index (CPI), and floating rate bonds will be used to raise 10 per cent of the first-half borrowing.

\n

\n\n

\n\n

\n\n

\n

- The borrowing will also be done through instruments that have been in demand in the market, instead of a maturity profile in the shape of 10-14 years.

\n

- The government also said it would introduce new benchmarks in the 2-year and 5-year categories.

\n

\n\n

What are the benefits of this move?

\n\n

\n

- Government's move had been welcomed by bond market player as it will ease pressure on the market considerably by reducing the first-half borrowing.

\n

- The borrowing plan will allow the government to meet all its expenditure requirements without getting into an overdraft situation.

\n

- CPI-linked bonds will have much better chance of success compared to WPI linkers.

\n

- The borrowing profile will help banks and other investors invest in bonds again.

\n

- This will also ease the redemption pressure on the government at the cost of duration risk on the bank credits.

\n

- Introduction of benchmarks allows government to raise money through bonds and liquidity and allows to create many other derivatives.
