

Increasing Income Inequality

What is the issue?

\n\n

\n

- Income of labourers is decreasing & that of capitalists is increasing.

\n

- Generally globalisation and automation is blamed for this.

\n

\n\n

Can globalisation and automation be blamed?

\n\n

\n

- **Globalisaation** - Rich countries tend have a lot of capital and poor countries tend have a lot of labor.

\n

- When rich & poor countries trade, labor's income share should go down in the rich countries due to increased supply of labour.

\n

- At the same time income of labors should rise in the poor countries due to increased demand.

\n

- But the labor share has been falling not just in rich nations, but in developing countries as well.

\n

- If globalization is purely to be blamed, this anamoly wouldn't be happening.

\n

- **Automation** - If automation is the only reason then, developing countries shouldn't be experiencing the fall in labor share because in technological terms they're far behind the rich countries.

\n

- Investment goods like machines, vehicles, computers haven't really become cheap enough in poor countries.

\n

\n\n

What is the real reason?

\n\n

\n

- **Poor Counties** - When poor countries are isolated from the global economy, they tend to specialize in things that rely on a lot of cheap labor -- farming, labor-intensive manufacturing & low-end services.

\n

- Capital owners do well, but can't get truly rich, because of lack of high-end investments and incur considerable labour costs.

\n

- But when trade opens up, the rich countries start offshoring manufacturing jobs to the poor countries.

\n

- These jobs offer better opportunities for workers, but much better opportunities for capitalists.

\n

- This reduces the labour share of income in relative terms.

\n

- **Rich Countries** - Companies in rich countries can ship labor-intensive manufacturing jobs in electronics assembly, toys and clothing to China and Bangladesh,.

\n

\n\n

\n

- At the same time they buy advanced machine tools and robots to do more high-end manufacturing.

\n

- As a result, workers in rich countries were hit harder by both free trade and the advent of cheap automation.

\n

- Labor wage decline can thus be linked to a combination of increased automation, globalization & development of large monopolies.
