

India's first electronic waste (e-waste) eco park

Prelims : Current events of National Importance | Environment

Why in News?

The environment minister recently announced that the Delhi government has undertaken a project to develop India's first electronic waste (e-waste) eco park in north Delhi's Holambi Kalan.

- The facility will be built under a **design, build, finance, operate, and transfer (DBFOT) model**.
- It will be on a public-private partnership (PPP) basis for a concession period of 15 years.
- It will be designed to process up to 51,000 tonnes of e-waste, including all 106 categories of waste listed under the E-Waste Management Rules, 2022.
- Construction of the park is expected to be completed within 18 months, to process **25% of e-waste** within 5 years.
- It is expected to generate over Rs. 350 Crore in revenue.
- The project is expected to create thousands of green jobs while reducing pollution and conserving resources.
- The park will also have dedicated zones for dismantling, refurbishing, plastic recovery, and a second-hand electronics market.
- **Circular Economy & Sustainable Development** – This project embodies the principles of a circular economy by minimizing waste, conserving resources, and creating a closed-loop system for electronic goods.
- It aligns with India's sustainable development goals.
- **Green Jobs & Skilling** – It will formalize the informal e-waste sector by establishing training centres to upskill workers, ensuring safer practices and creating thousands of "green jobs."
- **National Benchmark** – As one of four planned facilities nationally, it will serve as a model for other states, aiming to process 25% of Delhi's e-waste within five years.
- **Environmental Impact** – It directly tackles the hazards of improper e-waste disposal, reducing pollution (soil, water, air) from toxic elements and conserving valuable metals.
