

## India's first Tribal Genome Project

*Prelims: Current events of national and international importance | Science and Technology*

### Why in News?

*Gujarat has become the first Indian State to launch a genome sequencing initiative focused exclusively on tribal communities.*

- **Aim** - To improve healthcare for tribal communities by creating a dedicated genomic database.
- **Title** - "Creation of Reference Genome Database for Tribal Population in Gujarat".
- It is to sequence the genomes of 2,000 people belonging to tribal communities across 17 districts in the State.
- **Implementation agency** - Gujarat Biotechnology Research Centre (GBRC).
- **Funding** - Part of the 2025-26 State budget.
- **Detecting genetic disorders** - The initiative will focus on early detection and targeted treatment of genetic disorders such as sickle cell anaemia, thalassaemia, and certain hereditary cancers.
- **Facilitate personalized medicine** - By understanding the specific genetic variations within these communities, the project aims to enable early diagnosis and targeted treatment of diseases.
- **Bridge the gap between traditional knowledge and modern science** - The initiative seeks to integrate traditional knowledge with advancements in genomic research to improve tribal health.
- **Create a reference genome database** - The project will build a comprehensive repository of genetic markers and data specific to India's diverse tribal populations, which can be used for future research and public health planning.
