

# **India's Wise Move on Cryptocurrencies**

### Why in news?

\n\n

India's vigil on cryptocurrencies protected investors from steep losses of Bitcoin market.

\n\n

### What is the status of bitcoin market?

\n\n

∖n

- Bitcoin is the most popular crypto currency, there was an upward spiral in the price of bitcoin last year, with value racing from \$985 in January 2017 to \$18,847 by December.
  - \n
- This attracted investors by the drove, who viewed this as yet another avenue to make quick profits.
  - \n
- Recently the crypto currency has faced slide in its market cap, as bitcoin prices are solely dependent on demand and supply.  $\n$
- Due to the absence of an underlying asset, the prices of bitcoins are now down almost 80 per cent from their December peak.  $\n$

\n\n

## What is the action of Indian government on crypto currency?

\n\n

\n

- $\bullet$  Indian regulators and the Centre had been maintaining a vigil on crypto-currencies and had been cautioning users from time to time.  $\n$
- In 2013 and again in 2017, RBI issued a statement warning against using crypto-currencies.

 Union government took the first step in dousing the buoyancy in these assets by stating in the Budget of 2018 that bitcoin is not a legal tender in India.

\n

• Thus ruling out the possibility of these currencies becoming alternative mediums of exchange.

\n

\n\n

### What is SEBI's stand on crypto currencies?

\n\n

\n

• The Securities and Exchange Board of India seems to have desisted from passing any stricture against crypto-currencies as it viewed these as falling under the purview of RBI.

\n

- This silence emboldened those trading in bitcoins and other crypto-currencies in various unregulated exchanges across the country.  $\n$
- It was presumed that there was no harm in investing in these assets that promised inordinate returns.  $\gamma_n$
- Therefore exchanges facilitating trading in crypto-currencies thrived up to the first quarter of 2018 and unfortunately, most of the naïve first-time investors would have bought these assets towards the end of 2017 or early part of this year, at peak valuations.
- The RBI's move this April, to prohibit all entities regulated by it from servicing individuals or businesses that dealt in or settled in crypto-currencies, brought trading in crypto-currencies to an end.  $\n$

\n\n

### What further measures are needed?

\n\n

∖n

- The crash in crypto-currency prices in recent weeks makes it clear that they are highly unsuitable as an asset class for retail investors.  $\n$
- SEBI needs to spell out its stance on these crypto assets in order to

prevent a recurrence of such episodes.  $\n$ 

- The RBI move to constitute a committee to explore the feasibility of rupee-backed digital currency therefore appears to be a good idea.  $\n$
- Higher adoption of the block chain technology also needs to be encouraged.
  - \n
- Thus currencies can be effective as a medium of exchange only if they are well regulated.
