

Issues in Reviving Hydropower Sector

Why in news?

 $n\n$

The recently notified National Energy Policy proposes to bail out stranded large hydropower projects and to increase their life from current 35 years to 60 years.

 $n\n$

What is the current situation?

 $n\n$

\n

• As of May 2017, India's total generation capacity stood at 330GW, of which **44GW is from hydropower.**

۱n

- Despite having significant hydro potential of 148GW, only 44MW (30%) of the total potential is harnessed.
- The share of hydropower in the overall energy mix has been falling since 1962-63 when it stood at 51% (13% today). $\$

 $n\n$

Why the low capacity addition?

 $n\n$

۱'n

- The major reasons lie in **clearances delays**, local issues, land acquisition, rehabilitation and resettlement and contractual disputes.
- Only close to 7% hydro capacity belongs to the private sector today.
- So, the government plan to bring private investments into the sector has not been successful either.
- Numerous projects has been stranded for decades leading to increase in various costs in the original project.

 \bullet This poses a threat to the financial/business viability of projects.

 $n\$

What did the parliamentary committee say?

 $n\n$

\n

- The parliamentary committee on energy and sub-committees (2016) was formed to advise the policy interventions in the energy sector.
- \bullet It has recommended three measures to revive hydro power. $\! \backslash \! n$
 - Declaring all hydro projects as renewable energy sources and introducing Hydro Power Obligation (HPO);
 - $_{\circ}$ Reinstating mega power benefit for hydro projects (discontinued after 2012); and
 - $_{\circ}$ Providing better financing options (long-term loans, etc.,) $_{\backslash n}$

\n \n

 \bullet Several countries including the UK and Brazil consider hydro as renewables. $\ensuremath{^{\backslash n}}$

 $n\n$

What are the issues with the recommendations?

 $n\n$

\n

- Though hydropower is clean energy, it **comes with a cost** to the environment, wildlife, and relief and rehabilitation (R&R). $\$
- The major problems lie in land use, **emission of greenhouse gases such as methane**, sitting in geological sensitive areas.
- But, the larger problem faced in India is sub-optimal impact assessments and clearances by the MoEF.
- So, bringing hydro into renewables should be supported with proper regulation, rather than allowing developers a free hand in exploiting resources.

\n

• It is imperative that declaring hydro renewable **does not undermine the ecological issue** and R&R issues.

۱n

- \bullet In terms of buying hydropower, HPO will obligate the electricity companies to buy. $\ensuremath{\backslash n}$
- So, there has to be strict enforcement, or HPO might become new REC (Renewable Energy Certificates), which was a huge failure.
- \bullet Also, the benefit of all the proposed changes seems to apply to the projects that achieve commercial operation within five years of the notification. \n
- \bullet So, the problem may continue to persist for many delayed future projects. $\ensuremath{^{\text{h}}}$
