

Low retail inflation

Why in news?

\n\n

Consumer price inflation had slipped to 1.54%.

\n\n

Why there is a reduced inflation?

\n\n

\n

- Activity in the manufacturing sector has also slowed down.

\n

- GST-related adjustment and subsequent destocking may have reduced industrial growth.

\n

\n\n

Why it is a matter of concern?

\n\n

\n

- Moderate inflation levels are needed to drive consumption, under the assumption that higher levels of spending are crucial for economic growth.

\n

- Monetary Policy Committee (MPC) fixed the inflation levels to maintain in the zone between 2 and 4%.

\n

\n\n

What is now expected of the RBI?

\n\n

\n

- RBI has been maintaining the Repo rate at 6.25% since October 2016.

\n

- Since the inflation is lower now, a cut in the rate is expected.

\n

\n\n

Why RBI should be cautious before lowering Repo?

\n\n

\n

- Several State governments have taken fiscally expansive measures like loan waivers.

\n

- This is will increase the purchasing power of people which in turn might increase the inflation.

\n

- The monsoon and its effect on prices is yet to be felt.

\n

- The impact of the introduction of the GST, will reflect in the prices.

\n

- Increased allowances under the Seventh Central Pay Commission's award could also transmit into price gains.

\n

\n\n

\n

- All these would have had a complementary effect of low inflation.
