

Making Roads Safer

What is the issue?

 $n\n$

\n

• There was a series of road accidents in different parts of the country in recent days.

\n

It calls for fixing road design and enforcing safety protocols in India.

 $n\n$

What are the concerns?

 $n\n$

\n

• Accidents - Nationally around 1,50,000 are dying and several hundred thousand are injured annually.

\n

• The data on Indians killed or injured in road accidents put out annually by the Centre do not reflect the picture.

\n

• It obscures the human impact of the loss on national and State highways, as well as urban and rural roads.

\n

 $n\n$

\n

• Investigative mechanism - There is lack of expert help to conduct a technical investigation into an accident.

\n

• The executive agencies such as the Police and Public Works Departments thus fall short in this regard.

\n

 $n\n$

\n

• The present investigative machinery does not have the capability to determine faults.

\n

• Thus the officials responsible for bad road design and construction and lax traffic managers often escape liability.

• Victims - For accident victims, there is the heavy burden of out-of-pocket expenditure on medical treatment.

• The government had promised to address this issue through a cashless facility.

• But it has not been able to do so.

• As, the requisite amendments to the Motor Vehicles Act have not yet been passed.

\n

 $n\n$

How is the response?

 $n\n$

\n

• Supreme Court - SC has been trying to shake governments out of their apathy.

\n

• It constituted the Committee on Road Safety in 2014 at this end.

• It has also made several specific and time-bound directions.

• However, the response of the Centre and the States has been far from responsible.

• Black spots - Safety black spots on roads were identified on the basis of fatal accidents between 2011 and 2014.

• But only around 190 out of the around 790 such spots had been rectified.

• Funds had been sanctioned for another 256.

• The rest are either under State jurisdiction or awaiting sanction.

• Mere incremental approaches such as these result in worrying national record on road fatalities.

\n

What should be done?

 $n\$

\n

• **Investigation** - The accidents should be probed by qualified transport safety experts.

۱n

 \bullet This is crucial to determine the systemic shortfalls.

\n

 Only a scientific investigation system can stop the routine criminalising of all accidents.

\n

- \bullet There needs to be a report on the mishaps, to identify lapses, if any.
- And the remedial road engineering measures should be taken up accordingly.

\n

• **District Committees** - The SC has directed that the performance of district committees should be reviewed periodically.

۱n

• This should ideally follow mandatory public hearings every month.

\n

• This is for the citizens to record road risk complaints.

۱n

• **Mechanism** - The much-delayed National Road Safety and Traffic Management Board should be formed.

\n

• The provision for State governments to participate in this has to be materialised.

\n

• Ultimately, road safety depends on enforcement of rules with zero tolerance to violations.

\n

 \bullet More importantly, officials should be made accountable for safety. $\ensuremath{\backslash n}$
