

Maritime Power Projection in South-China Sea

[Click here](#) to read about Malabar Exercise

\n\n

What is the issue?

\n\n

The Malabar naval exercises in the Bay of Bengal is seen as a maritime response to China's aggression in Doklam.

\n\n

Why India's plan might not succeed?

\n\n

\n

- Modern-day trading nations regard the **oceans as a shared global common**, with equal opportunity rights for all user states.

\n

- Unless a sea-space is a site of overlapping claims (Ex. South China Sea) or a contested enclave in a geopolitically troubled spot (Ex. Persian Gulf), no coastal state can deny another the use of the high seas.

\n

- This balance only changes during war.

\n

- During peace-time operations, the maritime forces enjoy assured access to the seas that lie beyond national territorial waters.

\n

- Given the **Beijing's key role in the geopolitics and economics of the Indian Ocean region**, a plan to deny its warships entry into India's surrounding seas is unlikely to succeed.

\n

\n\n

What India can do?

\n\n

\n

- India could now resort to a **strategy of counter-power projection** by expanding the scope of its naval deployments in the South China Sea.
\n
- Indian Navy could plan to use the South China Sea's geopolitically sensitive spaces for the strategic power projection.
\n
- Such a strategy is bound to have a **deterrent effect on China's naval posture** in the Indian Ocean region.
\n
- After an arbitral tribunal invalidated many of China's historical rights within the nine-dash line, Beijing has been extremely cautious about perceived challenges to its authority.
\n
- This vulnerability must be taken advantage of by India.
\n
- The Indian Navy must plan for counter-presence in China's near-seas, where Beijing cannot prove a territorial infringement, yet feel the pinch of a perceived violation of its political sphere of influence.
