

MSP and Farmer Concerns

Why in news?

\n\n

\n

- Centre announced the 'Minimum Support Price' (MSP) for the oncoming rabi season.

\n

- Price incentives for farmers should be followed up by better marketing infrastructure.

\n

\n\n

What has been MSP impact recently?

\n\n

\n

- Current MSP rates saw a small increment for cereals, while promoting a shift towards pulses and oilseeds.

\n

- Increases have moderated since 2013 - cereals have seen an increase of merely 6-7% while pulses have been higher at 8-10%.

\n

- Consistent emphasis on pulses has translated into improvements in acreage and output.

\n

- 158 lakh hectares has been brought under rabi pulses in 2016-17, against 142 lakh hectares in the previous year.

\n

- The acreage under Gram (chana) - the principal rabi pulses crop, increase by 10% and accounted for 98 lakh hectares in 2016-17.

\n

- All this saw the production of record output of nearly 23 million tonnes of pulses.

\n

\n\n

What are the problems?

\n\n

\n

- While MSP can increase output and also change cropping patterns, it cannot work wonders in isolation.

\n

- The meagre MSP rise has evoked an angry response from farmer organisations, who claim that even cost recovery is a challenge.

\n

- Also, the delays in government procurements has been a point of concern alongside a lacklustre private marketing infrastructure.

\n

\n\n

How does the future look?

\n\n

\n

- Economic Survey 2016-17 has suggested a shift towards controlling input prices through 'Direct Benefits Transfer' instead of MSPs.

\n

- While streamlining subsidy deliveries, the need for farmers to live with dignity and income security should not be overlooked.

\n

- **Augmenting Prices** - NITI Aayog's has suggested a 'Price Deficiency Payment Mechanism'.

\n

- The proposal is to just transfer funds to farmers to bridge the gap when market prices fall below MSP instead of procuring directly.

\n

- This is fraught with implementation issues and runs the intrinsic risk of trader misuse.

\n

- **Market Infrastructure** - Supplementing government initiatives with better private marketing infrastructure is critical.

\n

- Increasing the number of mandis (estimated at 7,700 currently) is to be considered for enabling a better price discovery.
