

Narwhals (Unicorn of Sea)

Why in News?

Researchers from the Florida University, Canada's Department of Fisheries & Oceans, in partnership with Inuit communities of Canada used drones to provide new insights into narwhal behaviour.

- It is a medium-sized **odontocete** or toothed whale.
- It is different from all other toothed whales in that it has *no teeth in its mouth*.
 - Scientific name Monodon Monoceros (one tooth, one horn).
- Nativity It is found *only in Arctic waters*, spend their lives in the Arctic waters of Canada, Greenland, Norway and Russia.
- **Habitat** Most narwhals winter for up to 5 months under sea ice in the Baffin Bay-Davis Strait area.
- **Coloration** They change color as they age.
 - Newborns are a blue-gray
 - o Juveniles are blue-black
 - Adults are a mottled gray.
 - o Old narwhals are nearly all white

Narwhales coloration contributed to their name "corpse whale", refers to how their skin colour resembles that of a drowned sailor.

- **Diet** They *change their diets seasonally*, feeding intensely in the winter and eating little during the ice-free summer season.
- **Tusks** Some have up to 2 tusks, while others have none.
- The spiralled tusk juts from the head and can grow as long at 10 feet.
 - Males They have a single long, straight tooth (or tusk) that <u>protrudes 2 to 3</u> <u>meters</u> out of the upper left jaw.
 - **Females** They <u>almost never have a tusk</u>.

- **Usage of tusks** Used to investigate, manipulate and influence the behavior of Arctic char, a prey.
- **Tusking behaviour** A situation where <u>2 or more of them simultaneously raise</u> their tusks almost vertically out of the water, crossing them in what may be a ritualistic behaviour.
- It is to assess a potential opponent's qualities or to display those qualities to potential mates.
- Threats Oil and gas development and climate change pose threats to narwhals.
- Conservation status
 - IUCN Least Concerned
