

## National Biobank

*Prelims: Science and technology- Current events of National & International importance.*

### Why in News?

Recently Minister for Science and Technology inaugurated the National Biobank' and India's own Longitudinal Population Data study at CSIR-IGIB (Institute of Genomics and Integrative Biology).

- A National Biobank is a **large-scale repository** designed to collect, store, and manage biological samples (like blood, tissues, DNA) and associated health data (clinical, lifestyle, genomic).
- **Launched under** - The Phenome India Project.
- **Objectives**- The Biobank will serve as the backbone of a nationwide cohort study, collecting comprehensive genomic, lifestyle.
- **Collection of data** - A long-term, data-rich study tracking the health trajectories of individuals over several years.
- Involves the collection of clinical data from 10,000 individuals across India.
- **Tailored version** - The Indian version is tailored to capture the country's unique diversity, across geography, ethnicity, and socio-economic backgrounds.
- **Supports early treatment** - This initiative will aid early diagnosis, improve therapeutic targeting.
- **Treatment of complex diseases** - In the fight against complex diseases such as diabetes, cancer, cardiovascular ailments, and rare genetic disorders.
- **Individualised treatment** - Indian may receive individualised treatment tailored to their genetic makeup, lifestyle, and environment.
- **Disease Recognition** - It will help scientists uncover disease patterns, gene-environment interactions, and response to therapies within the Indian context.
- **Self-reliance** - A bold step toward India's self-reliance in healthcare data.
- **Prospect** - It has the potential to evolve into a global benchmark like the UK Biobank.

**Phenome India project**

- **Launched by** -The Council of Scientific and Industrial Research (CSIR).
- **Launched on** - December 7, 2023.
- **Objective** - To develop India-specific risk prediction models for cardio-metabolic diseases, including diabetes, liver diseases, and cardiac diseases.
- **Participants** - Around 10,000 individuals—primarily CSIR employees, pensioners, and their spouses.
- **Data collected** -Clinical questionnaires, lifestyle and dietary habits, anthropometric measurements, imaging and scanning data, and extensive biochemical and molecular data.
