

National Database on Sexual Offenders

Why in news?

\n\n

India recently became the ninth country to launch National Database on Sexual Offenders (NDSO).

\n\n

What is the objective?

\n\n

\n

- The database will be maintained by the National Crime Records Bureau (NCRB) under the Ministry of Home Affairs and made available only to law enforcement agencies.
 - ∖n
- It will include names, photographs, residential address, fingerprints, DNA samples, and PAN and Aadhaar numbers, of convicted sexual offenders. \n
- The database will contain more than 4.5 lakh cases, including profiles of first-time and repeat offenders, based on details compiled from prisons across the country.

∖n

 \bullet The offenders will be classified on the basis of criminal history and the data will be stored for –

\n

\n\n

\n

- 1. 15 years in the case of those classified as posing "low danger" $_{\n}$
- 2. 25 years for those presenting "moderate danger" $_{\ \ n}$
- 3. Throughout lifetime for "habitual offenders, violent criminals, convicts in gangrape and custodial rapes. \n

∖n

- It will only have details of persons who are aged 18 or more. $\slash n$
- Whenever the **details of a convict** are entered into a prison database anywhere in the country, the name will be uploaded to the registry.
- Appeals against a conviction will have to be updated by state prisons and an accused can be tracked until an acquittal on appeal. \n
- State police forces have been asked to regularly update the database from 2005, which will help keep track of released convicts who have moved from one place to another.

\n

• The registry will also store information on arrested and charge sheeted offenders but access to this will be limited to officers with the requisite clearance.

∖n

- Juvenile offenders are likely to be included in the database at a later stage. $\slash n$

\n\n

What are the concerns?

\n\n

\n

 \bullet Access - The database maintained by the FBI in the US can also be accessed by the public.

\n

- But the Indian registry will be available only to law enforcement agencies and not to the general public. γ_n
- Classification There is a possibility for deeming consensual sexual activity involving a girl under 18 as "low danger" offence and be recorded in the database, if the parents of the girl files criminal charges.
- Thus a person getting added to the sex registry depends on laws that can be misused to arbitrarily classify suspects. \n
- Under reporting The registry does not serve as a deterrent or help people who have survived sexual violence.
- In India, most sex crimes are committed by a person known to the victim. $\slash n$
- NCRB data of 2015 states that out of 34,651 reported rape cases, 33,098

were committed by people known to the victim.

∖n

- This might lead to people under reporting cases of rapes or sexual offences, when they were subjected to threatening by the offenders. \n
- Violence Also a data breach or even rumours of possible inclusion in the registry can also trigger vigilante violence against the accused. \n
- It will also result in discrimination and goes against the principle of trying to reform the criminal.
