

Need for Nuclear power

Why in news?

\n\n

Nuclear power is in need as the renewable power is subject to weather.

\n\n

What are the issues with renewable power sources?

\n\n

\n

- Solar power is available only when the sun is shining unless it is stored in some way.

\n

- In a year, a solar PV plant of one KW capacity generates no more than 2,000 KWh of electricity,

\n

- A coal-based or nuclear plant can generate around 7,000 KWh/year per KW of capacity

\n

- The hydro power is unevenly distributed across months.

\n

- There is a need of balancing Power source even there is a fully developed renewable power source.

\n

\n\n

What are the problems with coal power?

\n\n

\n

- There is a threat of climate change and the concern for environmental pollution.

\n

- The plants to reduce air pollution will increase the cost of coal power.

\n

- The cost of carbon capture and storage (CCS) is quite high and requires

more energy.

\n

- The cost of coal power would be some 30 to 50 per cent higher in coming days.

\n

\n\n

What is the need for Nuclear Power in India?

\n\n

\n

- To provide power when the sun is not shining, this balancing power is needed.

\n

- In India, more than 70 per cent of petroleum products are based on imports.

\n

- India's known extractable coal reserves will run out in about 40 years.

\n

- For India, renewable energy is inevitable and nuclear option should be retained as an insurance.

\n

- Nuclear power helps diversify the system and adds to energy security.

\n

\n\n

How Nuclear Power can be generated effectively?

\n\n

\n

- India announced an agreement with international companies to set up 7,000 MW of nuclear plants based on our domestic technology.

\n

\n\n

\n

- Nuclear plants have been run in the past with more or less constant load.

\n

- Design change will assure to run the power plants in a required load.

\n

- The cost of nuclear electricity will depend on how it is financed and cheap storage systems should be developed.

\n

- India can install the nuclear plants without delay and within budget, they are economically attractive.
