

New Wolf Spider Species

Prelims - Current events of National & International importance,

General issues on Environmental ecology, Bio-diversity & climate change.

Why in News?

Recently, researchers from the Zoological Survey of India (ZSI) announced the discovery of a new spider species on Sagar Island in the Sundarbans.

- Scientific name Piratula acuminata, commonly known as wolf spider.
- Genus India's first recorded instance of the Genus Piratula.
 - It is a group of wolf spiders predominantly found across Asia, with limited distribution in Europe and North America.
- Family Lycosidae.
- **Size** Medium-sized, approximately 8-10 millimeters in length.
- **Appearance** Pale creamy white coloration interspersed with brown, chalk-white spots on its abdomen, and a pair of light brown stripes towards the rear.
- Distinctive structural intricacies of its genitalia mark a novel identification for it.

- **Hunting Strategy** Unlike web-building spiders, these agile predators are ground-dwelling and ambush their prey.
- **Discovered in-** Sagar Island, the largest island within the Sundarbans deltaic complex, reinforces the ecological richness of this UNESCO World Heritage Site.
- Its unique ecosystems, shaped by alluvial deposits from the Ganga River, include vital mudflats and estuarine waters supporting a diverse array of flora and fauna.
