

Ocelot

Why in News?

Recently, fewer than 100 ocelots in the United States are feline species which are in the face of extinction.

A **feline** is a member of the cat family Felidae, which includes lions, tigers, cheetahs, leopards, pumas, and lynxes.

- Ocelot It is a <u>medium-sized wildcat</u>, which is twice the size of the average house cat.
- Scientific Name Leopardus Pardalis.
- **Habitat** Tropical and subtropical rainforests, mangrove swamps, savannas, semi-arid thorn scrub, brushlands, tree branches, or inside a hollow tree.
- Distribution Found in <u>Mexico, Central America and Northern Argentina in</u> South America.
- **Morphology** It has <u>beautiful fur coats</u> covered with a pattern of rosettes, stripes & spots, and fur is golden with black or dark brown doughnut-shaped spots that are tan in the middle.
- Eyes have a layer that reflects light, the neck and belly are white, rounded ears, and a short tail ringed with black or black bars.

- **Sexual dimorphism** Male is slightly lighter and longer than female.
- **Behaviour** It is a typically *solitary and nocturnal cat*.
- It is good swimmer, climber & jumper.
- They communicate with each other using body language, scent marking, and vocalizations.
- **Diet** Feed on rabbits, rodents, iguanas, fish, frogs, crabs, snakes, lizards, baby peccaries, young deer, monkeys or birds.

• Threats:

- Hunted for their fur or skins.
- Human encroachment, large cities being built and roadways.

• Conservation status

- IUCN Least Concern.
- **CITES** Appendix I.(Species that are the most endangered)

Ocelot subspecies, known as the Texas ocelot (Leopardus pardalis albescens), is endangered.
