

Onion price hike

What is the issue?

- Onion's price has been shooting in the wholesale markets and the central government has taken many efforts to control the increasing price.
- With elections nearing in some states, the government cannot upset **onion growers** in rural areas (part of the voter base) and **urban consumers** who have to shell out more money for the bulb.

What is happening?

- Since May 2019, prices in wholesale markets across the onion-growing districts of Maharashtra have been increasing.
- The ripple effect can be seen in the retail markets where the price of onion has also increased.
- According to Price Monitoring Cell (PMC) of the Consumer Affairs department, the retail price of onion has increased by Rs 20-25/kilo across the country in the last six months (as of September 2019).

What the government is doing?

- In early September 2019, the state-run Minerals and Metals Trading Corporation of India (MMTC) had floated contracts for importing onions from Pakistan, Egypt, China, Afghanistan, etc.
- Following sharp criticism, MMTC dropped Pakistan from the list of countries.
- The Centre also tried to restrict exports by sharply hiking the Minimum Export Price (MEP).
- In June 2019, the government ended the 10% export subsidy for onion.
- Anticipating a shortage, the central government had created a buffer stock of 57,000 tonnes, of which some have already been offloaded.

Why the price is rising?

- The price rise comes during months when onion consumption usually goes down.
- For example, it happens during the nine days of Navratri in Maharashtra and the month of Shravan.
- The current increase in onion prices is a fall out of **2018's drought** and the **delayed monsoon in 2019**.

- Some onion-growing areas have reported **excessive rain** and **delay in harvest period** by a week or so.
- Maharashtra, Karnataka, Gujarat, Madhya Pradesh, Rajasthan, Bihar, Uttar Pradesh and West Bengal account for almost 90% of onion production in the country.
- Maharashtra contributes nearly one third of the country's production.
- Farmers across the country take three crops of onions which ensure uninterrupted supply across the year. Of these,
 - 1. Kharif and late kharif are not amenable for storage (has higher moisture content)
 - 2. Rabi crop can be stored for a long period.
- Farmers usually store their produce in moisture-proof and dust-proof structures to prevent the bulbs from sprouting green shoots.
- Depending on the price, farmers release their produce, enabling steady supply for retail markets.
- A combination of factors has led to the increase in prices now.
 - 1. The cultivation area under rabi crop has decreased in Maharashtra. So, it reported a low cultivation in the rabi season of 2018-19.
 - 2. Karnataka received heavy rain during kharif crop's harvest period, which delayed the arrival of kharif onions from Karnataka.
- So, the stored rabi crop should have to be supplied to the markets.
- As the imported onions may not arrive soon, the price of the bulb is expected to stay high.
