

Partial credit enhancement to NBFC Bonds

Why in news?

 $n\n$

The Reserve Bank of India has permitted banks to grant partial credit enhancement (PCE) to bonds issued by NBFCs and housing finance companies recently.

 $n\n$

What is the importance of partial credit enhancement?

 $n\n$

\n

 Credit enhancement means improving the credit rating of a corporate bond or in this case, that of NBFC.

۱n

- For example, if a bond is rated BBB, credit enhancement, which is basically an assurance of repayment by another entity, can improve the rating to AA.
- This is done to provide an additional source of <u>assurance or guarantee to</u> service the bond.

\n

• Through the credit enhancement facility, the existing rating can be improved at an early stage, which enables the issuer to raise funds at a relatively lower yield.

\n

- Higher the credit rating, lower is the cost of raising funds.
- Since these bonds are long-term in nature, they appeal to institutional investors like pension funds and insurers.
- However, these investors, especially pension funds, invest mostly in investment grade securities which are at least AA-rated.
- Credit enhancement makes the bonds more attractive by improving the rating enough so that institutional investors become interested in adding these to their portfolios.

• For the investor, the facility provides a sort of insurance in case of hard times.

\n

- \bullet Basically, the credit enhancement gets used only when there is a shortfall in either paying interest or repaying principal. $\$
- \bullet Hence, investors are more secure about repayment even if there is uncertainty regarding cash flows for some time. \n
- Also, the bond market will benefit with more issues getting placed, which will help in developing the secondary market.

 $n\n$

What are the measures proposed?

 $n\n$

\n

- The credit crunch that followed the IL&FS crisis saw the RBI providing special incentives to banks to enable the flow of funds to NBFCs.
- This is because NBFCs and housing finance companies asked the government to make sure that confidence returns in the sector.
- Hence RBI has allowed banks to grant PCE to enable NBFCs to obtain funds from the bond market on favourable terms and to improve their bonds' credit rating.

\n

- However, it says that the occupancy of these bonds should not be less than three years and shall only be used to <u>refinance existing debt</u>.
- Also, banks shall introduce appropriate mechanisms to monitor and ensure that the end-use condition is met.
- The RBI has also increased banks' limit for offering their capital to a single non-infra funding NBFC from 10% to 15% till the end of this year.
- It has permitted banks to use government-issued securities as high-quality level 1 liquid assets equal to the bank's incremental offering to NBFCs and housing finance companies.
- However, the RBI limited the exposure of a bank through PCEs to bonds assigned by each NBFC or housing finance company to 1% of bank's capital funds within the current borrower exposure limit.

\n

 Also, banks are permitted to give PCE as the non-funded subordinate in the form of <u>conditional credit</u> only used in case of <u>cash flow shortfall</u> for maintaining the bonds.

 $n\n$

What are the takeaways?

 $n\n$

\n

- \bullet The move is aimed at enhancing the credit rating of the bonds and enabling these NBFCs to access funds from the bond market on better terms. $\mbox{\ \ }\mbox{\ \ }\mbox$
- It is expected to help NBFCs and HFCs raise money from insurance and provident or pension funds who invest only in highly-rated instruments.
- Thus the PCE can serve as a contingent line of credit to service the bonds in case of shortfall, thereby improve the credit rating of the bond issue.
