

Performance of UDAY

What is the issue?

 $n\n$

UDAY has started to yield results, but it needs to step up work in slow progressing states.

 $n\$

What is the status of UDAY?

 $n\n$

\n

- The central purpose of UDAY is to improve the financial health of stateowned power distribution companies.
- This goal is supposed to be achieved by improving operational performance, reducing the aggregate transmission and commercial (AT&C) losses, and bridging the gap between the average cost of supply (ACS) and average revenue realisation (ARR) of discoms.
- The AT&C losses and interest cost have all started decreasing, resulting in a 40 per cent reduction in the revenue-cost gap.
- \bullet The average AT&C losses have come down to 20 per cent in 2017 from 23 per cent in 2014. $\$
- That states have a lot of ground to cover to meet the 15 per cent target by 2019.

\n

 $n\n$

What is status of poor performing states?

 $n\n$

\n

• There are still eight states, including Chhattisgarh, Bihar, Uttar Pradesh, Rajasthan, Haryana, and Jammu & Kashmir, where the situation has not

shown much improvement.

\n

- \bullet In fact, the AT&C losses have actually grown after these states joined the debt-restructuring scheme. $\mbox{\sc h}$
- Besides the AT&C losses, even the difference between the power procurement cost and the selling price has gone up.
- In states such as Uttar Pradesh, Rajasthan, Punjab, Haryana, Jharkhand, and Tamil Nadu this gap between the ACS and ARR ranges from 0.26 to 2.55.

\n

- \bullet Despite this slippage, the average ACS-ARR gap was reduced to 0.46 in 2017 from 0.76 three years ago. $\ensuremath{\backslash n}$
- Unless these laggard states show a sustainable improvement in the financials of their discoms, UDAY may find it difficult to achieve its final goal at the national level.
