

Plastic roads in India

What is the issue?

 $n\n$

India has a huge potential of using its plastic waste for laying plastic roads.

 $n\n$

What are plastic roads?

 $n\n$

\n

• Roads constructed from mix of aggregate (sand and stone chips), bitumen and shredded plastic.

۱n

- The new material mix is reported to have superior binding.
- But plastic roads are quite the rage in the European Union which has taken on massive environmental conservation and pollution mitigation goals.

 $n\n$

What is the status of plastic roads in India?

 $n\n$

\n

- \bullet India has already built some 21,000 miles of roads using plastic waste. $\ensuremath{\backslash} n$
- The civic authority in Bengaluru has experimented with plastic roads building some 600 km of thoroughfare.
- The Centre even issued a set of guidelines for plastic blending in rural roads programme, the Pradhan Mantri Gram Sadak Yojana.
- Researchers in Tamil Nadu, has developed plastic blended water-resistant blocks, it can be used to line canals and other flowing water bodies.
- \bullet Plastic based roads are catching up in many other cities in India. $\ensuremath{\backslash n}$

What are the advantages of plastic roads?

 $n\n$

\n

- \bullet Safer disposal of plastic is ensured than melting it down and releasing copious quantities of toxic fumes. $\ensuremath{\backslash} n$
- \bullet It is a cheap input that could pull down road construction cost. \n
- \bullet Can be efficiently used for rural road building and smart city plans. $\ensuremath{^{\backslash n}}$
- \bullet The bitumen usage is cut because of plastic thereby reducing the carbon footprint of road construction. $\ensuremath{\backslash} n$
- \bullet It has greater durability than asphalt-concrete roads because they don't absorb water. $\ensuremath{\backslash n}$
