

# **Plastics and its Problems**

### Why in news?

Plastic recycling could be a solution to growing problems of plastics.

### What are plastics?

- Plastics are a group of materials, either synthetic or naturally occurring, that may be shaped when soft and then hardened to retain the given shape.
- Plastics are polymers. A polymer is a substance made of many repeating units
- Plastics can be divided into two general categories-thermoplastics and thermosets.
  - Thermoplastics are defined as polymers that can be melted and recast almost indefinitely.
  - Thermosets is a polymer that irreversibly becomes rigid when heated

### What are the advantages of plastics?

- Low production cost.
- Could be molded easily.
- Lightweight, translucent, transparent, and opaque.
- Resistant to corrosion.
- Poor conductor of heat and electricity.
- Minimize the food wastage.

#### What are the disadvantages of plastics?

- Plastics manufacturing also involves the addition of potentially hazardous compounds like stabilizers or colorants.
- Most plastics are non-biodegradable and they might take a long time to decompose
- Plastic materials clog waterways, oceans, seas, lakes etc.
- 1 in 3 species of marine mammals have been found entangled in marine litter.
- Eating food out of plastic containers may cause cancer.
- Many animals eat plastic materials and die
- Few additives such as phthalates etc. which are added in plastics to prevent its structure may cause serious hormonal imbalance in males and females.

### What is recycling of plastics?

- Plastic recycling has been described as the process of recovering scrap or waste plastics and reprocessing the material into useful products
- The two\_methods of recycling of plastics are

- **Traditional Recycling** The traditional recycling method involves melting plastics and processing them into new plastic products
- **Advanced Recycling** Advanced recycling is a process through which the effect of chemicals breaks down plastic material.
  - This method consists of three other techniques. These techniques include pyrolysis, chemical recycling, and gasification

## What are the reasons for low rate of plastic recycling?

- **Segregation** Unsegregated plastic waste being ended up in landfills and water systems.
- Lack of segregation of plastic waste at a local community level.
- Segregation of plastic at household level has remained largely unsuccessful.
- **No market** For plastics recycling for 5 types of plastics expect Polyethylene terephthalate, high-density Polyethylene (HDPE).
- Virgin plastics Being cheaper than recycled plastics
- Multi-layered plastics The plastics having multilayer are hard for recycling
- Lightweight flexible packaging This industry is booming but it is non-recyclable

### What are the efforts taken by India to mitigate plastics pollution?

- Since July 1, 2022, India has banned the manufacture, import, stocking, distribution, sale, and use of single-use plastic items with low utility and high littering potential.
- Plastic Waste Management Amendment Rules, 2021 prohibits identified single use plastic items by 2022
- Thickness of plastic carry bags increased from 50 to 75 microns from 2021 and to 120 microns with effect from the 2022
- Plastic Waste Management Amendment Rules, 2022- The guidelines provide a framework to Strengthen the circular economy of plastic packaging waste
- Promote the development of new alternatives to plastic packaging
- Provide the steps for moving towards sustainable plastic packaging by businesses

## What is the way forward?

- To create a viable market for plastics other than
- To use eco-friendly products like bamboo, jute, coconut etc.. to replace plastics
- Use of circular model economy

The circular economy is a model of production and consumption, which involves sharing, leasing, reusing, repairing, refurbishing and recycling existing materials and products as long as possible.

#### **Quick facts**

- Around 85% of plastic packaging worldwide ends up in landfills.
- Plastic production set to triple globally by 2060

 $\bullet$  only 9% of annual plastic waste recycled
