

## Portulaca bharat

*Prelims: Current events of National Importance | Conservation*

### Why in News?

*New plant species discovered in Aravali hills landscape near Jaipur.*

- It is a **new species of flowering plant** named after Bharat serves as a symbolic reminder of India's rich and still-unfolding natural heritage.
- **Genus - Portulaca** currently comprises about 153 species worldwide, primarily found in tropical and subtropical regions.
- These succulent plants are known for their toughness, water-storing tissues, and adaptation to extreme environments.
- In India, 11 species are currently known, including four endemics, mostly distributed in dry and semi-arid habitats.
- **Habitat** - Discovered in the rocky and semi-arid landscape of Aravali hills.
- **Appearance** - It has opposite and slightly conclave leaves and pale-yellow flowers becoming creamish-white towards apex, with the presence of glandular hairs on stamen filaments and thick roots.
- It added to the list of India's endemics.
- The plant's narrow endemism and specific habitat requirements make it *highly vulnerable* to habitat degradation and climate change.
- It has been provisionally assessed as **"data deficient"** under the International Union for Conservation of Nature Red List guidelines.
