

## Portulaca bharat

**Prelims: Current events of National Importance | Conservation** 

## Why in News?

New plant species discovered in Aravali hills landscape near Jaipur.

- It is a *new species of flowering plant* named after Bharat serves as a symbolic reminder of India's rich and still-unfolding natural heritage.
- **Genus Portulaca** currently comprises about 153 species worldwide, primarily found in tropical and subtropical regions.
- These succulent plants are known for their toughness, water-storing tissues, and adaptation to extreme environments.
- In India, 11 species are currently known, including four endemics, mostly distributed in dry and semi-arid habitats.
- Habitat Discovered in the rocky and semi-arid landscape of Aravali hills.
- **Appearance** It has opposite and slightly conclave leaves and pale-yellow flowers becoming creamish-white towards apex, with the presence of glandular hairs on stamen filaments and thick roots.
- It added to the list of India's endemics.
- The plant's narrow endemism and specific habitat requirements make it *highly vulnerable* to habitat degradation and climate change.
- It has been provisionally assessed as <u>"data deficient"</u> under the International Union for Conservation of Nature Red List guidelines.
