### Rescue plan for the Vaquita:

\n\n

\n

- The Vaquita (*Phocoena sinus*) is a rare species of porpoise.
- They are small toothed whales that are very closely related to oceanic dolphins.
- It is endemic to the northern part of the Gulf of California.

\n

\n\n

\n\n

\n\n

\n

- It is the **most endangered marine mammal species in the world.**
- IUCN status - Critically Endangered.
- International Committee for the Recovery of the Vaquita (CIRVA) was created by the Mexican Ministry of Environment to eliminate illegal fishing, removing gill nets and relocating remaining Vaquita to a temporary sanctuary and thereby conserving the species.

\n\n

### Habitable exoplanet next to Earth:

\n\n

- \n
- The exoplanets are planets that exist outside Earth's solar system.
- \n
- The term “habitable zones” refers to a planet where water could exist in a liquid state on a planet’s surface if there's sufficient atmospheric pressure.
- \n
- Astronomers have located the habitable zone "**The Wolf 1061**", a planetary system that is 14 light years away from the Earth.
- \n
- One of the planets in the wolf planetary system, **Wolf 1061c**, is entirely within the habitable zone.
- \n
- It has an atmosphere more similar to Venus.
- \n
- But the climate of Wolf 1061c is quite chaotic compared to earth, since the orbit around its star changes at a much faster rate than earth. The earth also experiences climate change due to change in its orbit around the sun which resulted in ice age previously.
- \n
- Now the earth is in interglacial period.
- \n

\n\n

\n\n

### **Warmest Year:**

\n\n

- \n
- **The year 2016 was the warmest year since record-keeping began in 1880.**
- \n
- The global average surface temperature last year was 0.94°C higher than the 20th century average and July was the warmest month ever recorded.
- \n
- Two phenomena were responsible for this. One was climate change and other was El Nino.
- \n
- Previously 2014 was the warmest year and the record was broken in 2015 and subsequently now in 2016 showing a continuous rise in the earth’s temperature.
- \n
- This is only the second time that the annual temperature record has been

broken three years in a row. The previous trio was during World War II.

\n

- All 16 years in our current century rank among the 17 warmest on record.
