RBI’s Surplus Halved

Why in news?

\n\n

\n
- RBI recently approved the transfer of surplus to the Government of India amounting to Rs.30,659crore for the year ended.
\n
- This is less than half of the surplus transfer in the previous year.
\n

\n\n

What is RBI’s surplus?

\n\n

\n
- The RBI’s surplus represents the difference of income over its expenditure.
\n
- The key source of income for the Central bank is the interest arising from its foreign assets and domestic assets.
\n
- It includes the interest earned on bond holdings through open market operations or purchase and sale of government securities.
\n
- The transfer of profits is provided in Section 47of the RBI Act.
\n
- It states that the balance of the profits of the bank is required to be paid to the Central government.
\n
- In 2012-13, YH Malegam Committee recommended the central bank to transfer its entire surplus to the government, without allocating anything to its various reserve funds, because it had adequate reserve funds.
\n
- The RBI has been transferring its entire surplus to the government since 2013-14.
\n
- The RBI’s financial year runs from July to June.
\n

\n\n

What are the reasons for the decline?

\n\n

\n
- The RBI did not provide any reason for the decline in dividend. The possible reasons could be –
\n
- **Demonetisation -**RBI's expenses would have gone up on account of the demonetisation exercise, whereby old denomination notes were sucked out of the economy and new denominations were circulated.
\n
- Also the notes that are not returned remain as the RBI's liability and cannot be passed on to the government.
\n
- **Reverse repo -**Reverse repo operation is when RBI borrows money from banks by lending securities.
\n
- The interest rate paid by RBI in this case is called the reverse repo rate.
\n
- It is done to absorb the liquidity in the system.
\n
- Multiple Reverse-repo auctions were conducted by RBI to drain surplus liquidity with the banking system after the demonetisation.
\n
- On an average, RBI paid 6% interest to drain the excess liquidity.
\n
- **Rupee Appreciation -**The rupee has appreciated by more than 6% against the dollar since January 2017.
\n
- This had depressed returns, in rupee terms, on the RBI's foreign holdings.
\n

\n\n

What will be the impact?

\n\n

\n
- In the Union Budget 2017-18, it was assumed that around Rs.75,000 crore would come from the RBI, public sector banks (PSBs) and financial institutions.
\n
- But the lower surplus will exert pressure on the government to meet its fiscal

deficit (FD).
\n
- FD might increase from 3.2% to 3.4% this year.
