

Recapitalisation and the Promise of Less Government

What is the issue?

\n\n

\n

- Despite the costs to the exchequer, the decision to recapitalise banks have been largely well received.

\n

- The action has but added to the consistent shift away from the promise of 'less government intervention' for better governance.

\n

\n\n

What is the price of Recapitalisation?

\n\n

\n

- The government is to provide around Rs 1.5 lakh crore, over two years for recapitalising banks.

\n

- If the sum is assumed to be split evenly, the fiscal deficit this year will go up by about 0.4% of GDP.

\n

- This will come on top of the expected shortfall in non-tax revenues.

\n

- So that the year's deficit could be about 4% of GDP - a slide from last year's 3.5%, instead of moving forward to the targeted 3.2%.

\n

- It will also raise the ratio of government debt to GDP, which is already too high.

\n

\n\n

Is government intervention increasing?

\n\n

\n

- **Banking** - More than 70% of the fresh capital to be pumped in is to come

from the government.

\n

- Notably, in many banks the extent of government shareholding has slipped to well below that level.

\n

- This means recapitalisation in the manner announced will raise the level of government ownership in banks.

\n

- This would be a policy reversal from the early 2000s (Narashiman Committee Recommendations), that intended to reduce government's stakes in banks.

\n

- **Forced Bailouts** - The public shares issued by General Insurance Corporation (a PSU) got a poor response.

\n

- Among institutional investors, the biggest investors were other government owned entities like the Life Insurance Corporation.

\n

- As the list also featured some government banks there is suspicion that government had prodded them to bail out the shares issued.

\n

- Notably, since the price of the new shares fell immediately on listing, all investors have lost value at the moment.

\n

- **Trend** - Increased government role has been felt in pharmaceuticals through price controls.

\n

- Vigorous pursuit of Aadhaar related compliance is seen as an intrusive approach by an over-zealous government.

\n

- Hence, increased government interventions has been felt across sectors and is indicative of a trend rather than isolated incidences.

\n

- **Private Withdrawal** - Meanwhile, the private sector's role in infrastructure creation has become more cautious.

\n

- Even new sectors that opened to the private, like 'defence production' has made little progress.

\n

\n\n

What is the way ahead?

\n\n

\n

- The current regime is clearly faltering on its promise of reducing government's interventionist approach.
\n
- But the opposition too doesn't offer much solace in this regard and has rather vouched for a more interventionist leftist agenda.
\n
- The pressure of slowing growth and lack of jobs has been driving most of the present interventions.
\n
- It is to be noted that enhanced GDP growth is what would provide more head room for both pro-market policies and increased welfare spending.
