

Regulating NBFCs - II

What is the issue?

 $n\n$

NBFCs and banks need not be treated in the same manner and hence sectorspecific measures are needed to revive the sector.

 $n\n$

What is the background?

 $n\n$

\n

- Commercial Paper (CP) is an unsecured money market instrument issued in the form of a promissory note with a maximum validity of one year.
- After the <u>IL&FS</u> default, the Indian bond market got very concerned about commercial paper issued by NBFCs.
- This has translated into a tough stress test for NBFCs.
- Bond market investors are now looking beyond credit ratings of NBFCs, which has resulted in better NBFCs getting capital while others are not.
- NBFCs are fundamentally different from banks and insurance companies in that the NBFCs generally do not accept deposits, unlike banks.
- Hence, there is no problem of an assured rate of return and the need to maintain liquidity for NBFCs.
- This was also a major reason why a micro-prudential regulation on the operations of NBFCs was not deemed necessary.

What are the concerns?

 $n\n$

۱n

• Lack of IFRS accounting - International Financial Reporting Standards provide a common global language for business affairs so that company accounts are understandable and comparable across international boundaries.

\n

• They are the rules to be followed by accountants to maintain books of accounts which are comparable, understandable, reliable and relevant as per the users internal or external.

\n

• Indian NBFCs need to move towards IFRS to have a clear picture of market-based valuation of their assets.

\n

- This would help the market investors to analyse the stress early in the concerned NBFCs and would avoid investing in them.
- **Usage of credit ratings** It is getting too easy for an institutional investor in India to make bad decisions based on mere credit-ratings.
- Though Credit-rating agencies are a valuable opinion on the credit risk of an issuer, regulators should stop requiring that credit ratings be obtained.
- This will make Institutional investors to think for themselves in assisting their decision process.

\n

- Failure of Indian bond market Heavy growth of mutual fund investments in India results in a sharp collapse in purchases of bonds issued by NBFCs.
- Collective investment schemes based on bonds issued by NBFCs need to be illiquid (not easily getting converted into cash) so that a stable investment is maintained.

\n

 $n\$

What should be done?

 $n\n$

\n

- When an NBFC balance sheet exceeds about 1% of GDP, its default can have systemic consequences.
- \bullet Thus, there should be a minimal form of micro-prudential regulation that will assist resolution for defaulting NBFCs. $\mbox{\sc NBFCs}$
- NBFCs also require a <u>specialised bankruptcy code</u> operated by a resolution corporation to pave the way for quick bailouts.
- Some NBFCs have household investors, and thus a <u>consumer protection</u> <u>mechanism</u> to address issues such as sales practices and coercive collection practices needs to be framed.
 \n
- Thus the RBI needs to frame an overarching mechanism to pave the way for sound information disclosure on the operations of NBFCs, so that a stable investment gateway for this sector shall be ensured.
- Also, in the future, deposit-taking NBFCs could graduate into banks as and when their financial portfolio gets increased as that of banks.
