

Reimagining Urban Governance

What is the issue?

\n\n

∖n

- Migration from rural areas is leading to overcrowding of urban areas. h
- Hence, a fresh look at urban governance is necessary. \slashn

\n\n

What do the trends say?

\n\n

\n

- Cities are economically vibrant spaces around the world and draw a large number of rural migrants looking for better prospects. \n
- This is a sustained trend, particularly in developing countries now, as production, jobs and markets get concentrated. \n
- 'UN Department of Economic and Social Affairs' released its 2018 'World Urbanization Prospects', which forecasted future trends. \n
- India, China and Nigeria are expected to lead other countries and account for 35% of the projected growth in urban population by mid-century. \n
- It estimates 52.8% of Indians will live in cities by 2050, (presently 34%) and that Delhi would become the world's most populous city by 2018. \n
- This forecast frames the challenge before developing countries in general and India in particular. γn

\n\n

What is the state of cities in India?

\n\n

\n

- Urbanisation in India is a complex process, as it is defined not by a constant migration of rural residents but by the flow of mostly male workers. \n
- Big cities expand geographically and engulf neighbouring towns, which is also another significant way in which populations are becoming urbanised. \n
- Even with only about a third of Indian population living in cities, civic anarchy is rampant in the country. \n
- Housing deficits have led to the proliferation of slums, and lack of enforcement of building norms has left the metros heavily congested. \n
- Also, poor investment in public transport has fuelled unsustainable levels of private vehicle use.

١n

What are the challenges?

\n\n

\n\n

∖n

- Policy Challenges There is a strong policy emphasis on improving facilities in rural areas, which is to stymie the migration to urban centres. \n
- But there is a natural economic magnetism to cities, which is proving too strong to resist, thereby mandating suitable village oriented economic policies.
 \n
- Also, designing cities in such a way to ensure that their high levels of productivity and efficiency are not compromised is a big policy challenge. \n
- Elected Mayors lack the stature and authority to introduce urgently needed reforms despite the $74^{\rm th}$ Amendment that gave them significant autonomy. \n
- **Pollution** World Health Organisation (WHO) has noted that 14 Indian cities are among the top 20 worldwide with the worst air quality profiles. \n
- Most cities are also unable to collect and dispose of municipal waste scientifically, and simply dump them in the suburbs. \n
- Such a dismal scenario can only get worse with higher population concentrations, unless city governments come into their own. \n

- Integrationist Approach While the Centre's goal of homes for all by 2022 is laudable, it is unlikely to be realised without a push from the States. \n
- Schemes driven by innovation and low-cost approaches and augmenting rental housing should be a priority within the plan. \n
- Integrating green spaces, open commons and wetlands will make cities cleaner and aesthetically richer. \n
