Repo Rate Hike

Why in news?

\n\n

\n
- The monetary policy committee (MPC) of the RBI has decided to increase the repo rate by 25 basis points.
\n

\n\n

What is a repo rate?

\n\n

\n
- Repurchase rate or the repo rate is the rate at which the RBI lends money to commercial banks.
\n
- This is availed by the banks in the event of any shortfall of funds.
\n
- Reverse repo is the rate at which the RBI borrows money from commercial banks within the country.
\n
- RBI has now increased the repo rate by 25 basis points to 6.5% in the recent MPC meet.
\n
- The Reverse repo is adjusted to 6.25 per cent.
\n

\n\n

What are the driving factors?

\n\n

\n
- **Inflation** - Fear of rising inflation rates has been a major factor for raising the policy rates.
\n
- According to the RBI, inflation outlook is likely to be shaped by several factors:

\n
- 1) The foremost is the government’s decision to increase the minimum support price (MSP) for kharif crops.
\n
- MSP hike may have a direct impact on food inflation and eventually on headline inflation.
\n
- 2) The gradual impact of HRA (house rent allowance) revision by state governments could push inflation further up.
\n
- 3) There is a continuing volatility in crude oil prices and is also vulnerable to geopolitical tensions.
\n
- The resultant supply disruptions is one of the main risks to the inflation outlook.
\n
- 4) Rainfall has so far been 6% below the long-period average and deficient over a wider area than last year.
\n
- This has resulted in a drop in the total sown area under kharif.
\n
- Regional imbalances in rainfall could pose risks to paddy output and eventually reflect in CPI inflation.
\n
- 5) The recent round of the RBI’s survey of households also reported a rising inflationary trend.
\n
- 6) Moreover, RBI's inflation projection stands at 5% in the first quarter of 2019-20.
\n
- It has projected inflation at 4.6% in Q2 and 4.8% in the second half of the financial year 2018-19, with risks evenly balanced.
\n
- So the overall inflation trend demands that India opt for a tight policy (higher rates).
\n
- **Currency** - The recent global trade war has resulted in competitive currency devaluation.
\n
- In the event of a currency war, the domestic currency has to give way for depreciation pressure of the region.
\n
- But depreciation is likely to contribute to the vulnerability of the economy. Click here to know more

\n
- Thus, avoiding such risks is essential for ensuring macroeconomic stability.
\n
- It is also crucial for maximising the chances of a growth profile of 7 to 7.5% in India.
\n
- A rate hike by the central bank thus attempts to strengthen the currency and avoid getting affected by the currency war.
\n
- **Recovery** - The MPC was for long wary of an interest rate hike due to the impact it could have on growth prospects.
\n
- However, there was an increased output of the eight core industries in the recent period.
\n
- This suggested that the economic recovery was back on track.
\n
- It was thus convincing for MPC to now focus on containing headline inflation.
\n
- Given all these, the rate hike seems to be a right measure at the right time to ensure growth as well as avoid risks.
\n

\n\n

Why a neutral stance?

\n\n

\n
- Given the projected inflationary risks, there were widespread demands for higher policy rates.
\n
- But the RBI has maintained fairly a neutral policy stance.
\n
- This means that RBI has made only a marginal increase which is proportionately lesser to the inflation projections.
\n
- One of the reasons is that the risks that are cited as the factors for the rate hike are not well established.
\n
- Primarily, the CPI inflation risks are only a projection, though informed, with a fair bit of uncertainty.
\n
- Hence a neutral stance would help accommodate the upcoming domestic and external uncertainties.

\n
- This could be in relation with the
\n

\n\n

\n
i. impact of government’s policies
\n
ii. oil price direction
\n
iii. trade disputes and impact on global growth
\n
iv. US rate trajectory
\n

\n\n

\n
- So according to RBI, a neutral stance would keep the policy options open for any future economic scenario.
