

SAKSHAM-3000

Prelims: Current events of National and International Importance | science and technology.

Why in news?

Recently, Minister of State for Communications launched SAKSHAM-3000 High-Capacity Switch-Cum-Router.

- **SAKSHAM-3000** It is a state-of-the-art data centre switch-cum-router designed for next-generation digital infrastructure.
- **Developed by** Centre for Development of Telematics (C-DOT).

C-DOT is the Telecom Technology development centre was established in August 1984 as an autonomous body under the Department of Telecommunications (DoT), Ministry of Communications

- **Traffic manager** It acts a traffic manager that help to build stronger, faster, and more secure internet and communication networks for the country.
- Whenever huge amounts of data like phone calls, internet browsing, videos, or cloud storage is transmitted, this machine ensures they move quickly, smoothly.

Technical specifications

- Ultra-low latency There is almost no delay and the information travels extremely fast from one point to another.
- **Capability** It can handle up to 25.6 Terabits of data per second.
- **PTP (Precision Time Protocol)** It keeps all parts of the network perfectly in sync, like setting the same clock for everyone.
- Sync-E (Synchronous Ethernet) It ensures stable and accurate timing in internet networks.
- WRR (Weighted Round Robin) Distributes data fairly among different users, avoiding congestion.
- WRED (Weighted Random Early Detection) Detects potential overload early and prevents network slowdowns.

Applications of SAKSHAM-3000

- **5G and 6G mobile networks** It helps in building fast and reliable next-generation mobile networks.
- **Data centres** It is used in large computer facilities where huge amounts of data are stored and managed.

- **Cloud computing** It supports cloud-based services like online storage, streaming platforms, and apps.
- Artificial Intelligence (AI) workloads It handles the heavy data requirements of AI technologies, making AI applications faster and more reliable.
- **Government and defence networks** It provides secure and high-speed communication for defence and critical government operations.
- **Smart Cities & IoT networks** It supports digital infrastructure required for smart cities, connecting sensors, cameras, and other devices.
