

Scheme for Sharing Cauvery Waters

What is the issue?

\n\n

\n

- The draft scheme for sharing Cauvery Waters has been presented by the union government to the Supreme Court.

\n

- It is now for the Cauvery basin States to quickly embrace the scheme to avoid further bickering and rioting.

\n

\n\n

What are the broad contours of the scheme?

\n\n

\n

- The Centre has finally submitted a draft scheme in the Supreme Court for distribution of Cauvery waters among the riparian States.

\n

- While the centre has given no name for the scheme, it derives largely from the pronouncement of the 2007 Cauvery Tribunal's.

\n

- It will be a two-tier structure, with an apex body charged with the power to ensure compliance, and a regulation committee that will monitor the flows.

\n

- The powers and functions of the authority are fairly comprehensive and its decisions are intended to be final and binding.

\n

- However, if any States is not cooperative, the authority has to seek the Centre's help, and the Centre's decision will be final in such a scenario.

\n

- The authority's powers include apportionment, supervision of operations of reservoirs and regulation of water releases.

\n

\n\n

What are some concerns?

\n\n

\n

- **Final Say** - The clause involving the central government's envisioned role in case of non-compliance by any state is tricky.

\n

- While this has been envisioned to solve the problem, there is the possibility of the centre taking a partisan stand in the future due to political considerations.

\n

- Rather, strict compliance with the court's allocated share of water at all times would be better, instead of leaving situations to the centre's discretion.

\n

- **Differences** - There are a few differences between the Cauvery Management Board envisaged by the Tribunal and the authority proposed in the scheme.

\n

- The Tribunal favoured the chairperson being an irrigation engineer with not less than 20 years of experience in water resources management.

\n

- But the present scheme envisions a senior engineer in water resources management or an officer in the rank of "Secretary" at the union level.

\n

- Similarly, the representatives from the four States would be administrators rather than engineers as proposed by the Tribunal.

\n

\n\n

How does the future look?

\n\n

\n

- The Cauvery dispute has dragged on for several decades, and it would be unfortunate if the final decision isn't implemented in letter and spirit.

\n

- All States should agree to the broad contours of this scheme and comply with the authority's decisions.

\n

- If the proposed draft is implemented, then an issue concerning the livelihood of millions will be taken out of the sensationalist political domain.
