

## **SEBI's Norm on Algo trading**

### **Why in news?**

\n\n

SEBI has announced new norms on algorithmic (or) Algo trading.

\n\n

### **What is Algo trading?**

\n\n

\n

- Algorithmic trades are orders executed on the stock exchange platform by computers through a programme designed by the user.

\n

- Algo trades can involve different degrees of manual intervention ranging from zero-touch algorithms which does not require much manual intervention.

\n

- It was introduced in 2009 in India and there has been rising interest from large domestic and foreign institutional investors.

\n

- Algo trade in India accounts for about 35-40 percent of turnover of exchanges.

\n

- Algo trades help institutional investors increase the efficiency of trade execution and spot fleeting trading opportunities.

\n

- It will also increase liquidity to the market as there are more transactions and investments which gain using this method.

\n

\n\n

### **What are the concerns with Algo trading?**

\n\n

\n

- Algo trades have often been blamed for magnifying trends and induce flash crashes in the market.

\n

- A bug in the programme or error by traders can cause the stock prices to fluctuate wildly and may even collapse the entire market.

\n

\n\n

### **What is SEBI's recent announcement in this regard?**

\n\n

\n

- SEBI approves the Algo programmes before they are put into use in any of the Indian exchanges.

\n

- By which stock exchanges have to allot a unique identifier to each approved algorithm and ensure that each order is tagged with it.

\n

- Recently to check price swings SEBI has announced penalties that would be levied on Algo orders placed more than 0.75 per cent away from the last traded price.

\n

- It has also proposed a stricter monitoring of these trades to ensure the smooth functioning of the market.
