

# **SEBI's Norm on Algo trading**

### Why in news?

\n\n

SEBI has announced new norms on algorithmic (or) Algo trading.

\n\n

## What is Algo trading?

\n\n

∖n

- Algorithmic trades are orders executed on the stock exchange platform by computers through a programme designed by the user.  $\n$
- Algo trades can involve different degrees of manual intervention ranging from zero-touch algorithms which does not require much manual intervention.
  - \n It was introduced i
- It was introduced in 2009 in India and there has been rising interest from large domestic and foreign institutional investors.
- Algo trade in India accounts for about 35-40 percent of turnover of exchanges.
  \n
- Algo trades help institutional investors increase the efficiency of trade execution and spot fleeting trading opportunities.
   \n
- It will also increase liquidity to the market as there are more transactions and investments which gain using this method.  $\n$

\n\n

## What are the concerns with Algo trading?

\n\n

∖n

• Algo trades have often been blamed for magnifying trends and induce flash crashes in the market.

\n

- A bug in the programme or error by traders can cause the stock prices to fluctuate wildly and may even collapse the entire market.  $\n$ 

\n\n

#### What is SEBI's recent announcement in this regard?

\n\n

∖n

• SEBI approves the Algo programmes before they are put into use in any of the Indian exchanges.

\n

- By which stock exchanges have to allot a unique identifier to each approved algorithm and ensure that each order is tagged with it.  $\n$
- Recently to check price swings SEBI has announced penalties that would be levied on Algo orders placed more than 0.75 per cent away from the last traded price.

\n

- It has also proposed a stricter monitoring of these trades to ensure the smooth functioning of the market.  $\n$
