

Shortfalls in Fighter Jets - IAF

What is the issue?

 $n\n$

The Indian Air Force (IAF) does not have enough fighter jets and hence there is an immediate requirement to address the shortfall.

 $n\n$

What is the background?

 $n\n$

\n

• The IAF is now left with only 30 fighter squadrons and in a couple of years, it will be down to 26 squadrons.

۱'n

• The reason for this include – \n

 $n\n$

\n

- 1. Gradual decommissioning of obsolete aircraft over time \n
- 2. The loss of aircraft in crashes
- 3. Massive delays in purchases of new aircraft

 $n\n$

۱n

• In comparison, the Pakistan Air Force will have 25 squadrons of fighter aircraft, while China will be able to unleash as many as 42 squadrons upon India in case of a conflict.

\n

• The government's mandate for the IAF is to be prepared for a <u>two-front</u> collusive threat from China and Pakistan.

 \bullet For this, the IAF is authorised 42 squadrons of fighter aircraft, which is the bare minimum it needs to dominate a two-front conflict. \n But the last time the IAF had the full complement of 42 squadrons was nearly 17 years ago, and the numbers have only fallen since.

 $n\n$

What should be done?

 $n\n$

\n

- **Tejas** is the first advance Fly-by-wire (FBW) fighter aircraft designed and developed <u>indigenously</u>by Aeronautical Development Agency (ADA) and produced by Hindustan Aeronautics Limited (HAL).
- Tejas is a 4th Plus generation aircraft with a glass cockpit and is equipped with state of the art Satellite aided Inertial Navigation System.
- It has a digital computer based attack system and an autopilot.
- \bullet It can fire Air to Air Missiles, Bombs as well as Precision Guided Munitions. $\mbox{\ensuremath{\upshape h}}$
- \bullet The IAF is committed to get six squadrons from HAL, four of them of the Tejas Mark1A version. $\ensuremath{^{\backslash n}}$
- While HAL hopes to provide 18 aircraft per year, it has not been able to ramp up capacity to even half that number so far.
- This situation can impinge on the availability of fighter squadrons in the near future.
- \bullet IAF will get two squadrons of Rafale by 2023, and it has plans for six squadrons of another foreign fighter within a decade. \n
- But the latter is still a proposal on the planning board, and a long way away from getting implemented.
- Thus, the IAF is looking at a scenario where it will have to undertake emergency imports, perhaps at an exorbitant cost, to make up the demand for fighter jets.

 $n\n$

How do other major powers tackle situations like these?

 $n\n$

\n

- Among the global military powers, India is perhaps the only country which doesn't produce top quality fighter jets indigenously.
- The US, Russia and the Europe, all have highly developed defence industries that can design, develop, produce and supply fighter jets to their air forces.
- Countries like Pakistan and Israel can depend upon their allies, wherein Pakistan Air Force earlier got F16s from the US and now it gets the JF17 from China.

\n

- \bullet Since India has no such option, the long-term answer is to promote indigenous manufacturing in a major way. \n
- \bullet But in the immediate term, there is a need to take steps to ensure that this shortfall is made up quickly as a national security imperative. \n
