

# **Sickle Cell Anaemia Elimination Mission**

# **Prelims: Current events of national and international importance**

# Why in news?

According to the Union Health Ministry National Sickle Cell Anaemia Elimination Mission has screened over 5.72 crore people, identifying more than 2.09 lakh sickle cell patients and 16.3 lakh trait carriers.

- Sickle Cell Anaemia Elimination Mission It is launched under the National Health Mission (NHM).
- Launched in 2023
- **Objective** It focuses on universal screening, especially in high-prevalence tribal areas.
- Target Screen 7 crore individuals under age 40 across 17 States by 2025-26.
- Key States with high prevalence:
  - Madhya Pradesh
  - $\circ$  Maharashtra
  - $\circ$  Odisha
  - $\circ$  Jharkhand
  - $\circ$  Chhattisgarh
  - Uttar Pradesh, Bihar, Gujarat, Rajasthan (included under mission)
- **Importance of screening** Early detection through screening of pregnant women and new-borns.
- It ensures timely treatment and reduces complications.
- Counselling families to overcome stigma and resistance to modern healthcare.
- Challenges in tribal areas Deep-rooted reliance on traditional medicine.
- Fear or mistrust of modern healthcare.
- Difficult accessibility & lack of regular follow-ups.
- Social stigma leading to delayed diagnosis.
- **Treatment** Hydroxyurea, a key medicine for SCD, being distributed via trained health workers.

### Sickle Cell Disease (SCD)

- It is a genetic blood disorder causing abnormal haemoglobin.
- Red blood cells become rigid & sickle-shaped.
- it leads to severe pain, anaemia, organ damage

and increased infection risk.

• It is particularly prevalent among tribal populations, but not restricted to them.
