

Snow leopard conservation

Why in news?

 $n\n$

The conservation status of snow leopard has been changed from "endangered" to "vulnerable" by the International Union for Conservation of Nature (IUCN).

 $n\n$

What are the characteristic features of Snow leopards?

 $n\n$

 $n\n$

۱n

- \bullet These are rarely sighted cats that live in the peaks of central Asia including the Himalayas and Russia's remote Altai mountains. $\$
- Their habitat covers more than 1.8 million sq km, across 12 countries and usually found at elevations of 3,000-4,500m.
- Their coats change with the seasons from a thick, white fur to keep them warm and camouflaged in winter, to a fine yellow-grey coat in summer.
- They are threatened by poaching for their fur, infrastructure developments and climate change.

• In India this animal habitat is in Jammu and Kashmir, Himachal Pradesh, Uttarakhand, Sikkim and Arunachal Pradesh.

 $n\n$

What are the criteria for endangered status?

 $n\n$

\n

- An observed, estimated, inferred or suspected population size reduction of ≥ 50% over the last 10 years or three generations
- Area of occupancy estimated to be less than 500 $\rm km^2$, $\rm ^n$
- Population size estimated to number fewer than 2500 mature individuals witness a continuous decline
- \bullet Population size estimated to number fewer than 250 mature individuals.
- \bullet Quantitative analysis showing the probability of extinction in the wild is at least 20% within 20 years or five generations $\mbox{\ \ \ }\mbox{\ \ \ }\mbox{\ \ \ }\mbox{\ \ \ \ \ }\mbox{\ \ \ \ }\mbox{\ \ \ \ }\mbox{\ \ \ \ }\mbox{\ \ \ \ }\mbox{\ \ \ \ \ }\mbox{\ \ \ \ }\mbox{\ \ \ \ \ }\mbox{\ \ \ \ \ }\mbox{\ \ \ \ \ \ }\mbox{\ \ \ \ }\mbox{\ \ \ \ \ }\mbox{\ \ \ \ }\mbox{\ \ \ \ \ }\mbox{\ \ \ \ \ }\mbox{\ \ \ \ }\mbox{\ \ \ \ }\mbox{\ \ \ \ \ }\mbox{\ \ \ \ \ \ \ }\mbox{\ \ \ \ \ }\mbox{\ \ \ \ }\mbox{\ \ \ \ }\mbox{\ \ \ \ \ \ }\mbox{\ \ \ \ }\mbox{\ \ \ \ }\mbox{\ \ \ \ \ }\mbox{\ \ \ \ \ }\mbox{\ \ \ \ }\mbox{\ \ \ \ \ }\mbox{\ \ \ \ }\mbox{\ \ \ \ }\mbox{\ \ \ \ }\mbox{\ \ \ \ \ \ }\mbox{\ \ \ \ \ }\mbox{\ \ \ \ \ \ }\mbox{\ \ \ \ \ }\mbo$
- \bullet The current move is based on the criterion that it crossed the threshold number of 2500 $^{\mbox{\tiny \mbox{$\backslash$}}}$

 $n\n$

What will be the impact of the downgrade?

 $n\n$

۱n

- The factors that pose a threat to the species, like trafficking live animals in Central Asia, and hostility from communities because of its attacks on livestock, remain unchanged.
- New research indicates that even when wild prey is available, the attacks on livestock by snow leopards have been on the rise.

n

- The bigger challenge of loss of habitat owing to changing climate patterns needs continuous conservation efforts.
- \bullet There is no clear knowledge about its population health, in remote habitat in the alpine zones of the Himalayas and trans-Himalayas. \n

- There are possibilities of trafficking of this animal in Central Asia, and hostility from communities because of its attacks on livestock.
- \bullet A more fundamental worry is over the likely loss of habitat owing to changing climate patterns. $\mbox{\sc h}$
- So the downgrading might send a wrong message and the governments might shift their focus away from the conservation efforts.
- It is vital that the momentum of conservation should not be lost merely on account of the technicality.

 $n\n$

What should be done?

 $n\n$

\n

• The existing conservation must be strengthened by enlarging protected areas in all the range countries.

\n

- Studies on the leopard's vulnerability have to be intensified.
- \bullet The task of monitoring its entire habitat of high mountains must speeded up. \n
- The reasons for hunting livestock must be dound out to insulate the owners from losses.

\n

- They should be encouraged to move away from traditional pastoral grazing.
- \bullet Incompatible activities such as mining and human interference in their habitats should be kept out. $\mbox{\sc h}$
